

3M™ Scott™ Pak-Tracker Firefighter Locator

3M Scott Pak-Tracker Firefighter Locator Technology

The two component location system consists of a rugged, ergonomically-designed, easy-to-operate, hand-held receiver and either a personally-worn, compact transmitter or a transmitter integrated into the 3M Scott Air-Pak® Fifty™ and NxG2™ SCBA's. The basic principle of operation is a 2.4GHz signal strength received at the hand held unit from the transmitting personal unit.

Features

The Pak-Tracker Locator was developed after two years of extensive voice-of-the-customer research and field testing. The location system is simple to operate and is offered as either stand-alone system or integrated into the 3M Scott SCBA.

Benefits

The Pak-Tracker Locator is an additional tool for search and rescue operations to assist in locating a trapped or downed first responder within a single or multi-story structure and has a location distance greater than 900 feet (300 meters). The same hand-held receiver can be employed on either the stand-alone or SCBA-integrated location system and can monitor and scroll through to 36 personal transmitters. The system can be used with or without a SCBA.

Features	Benefits
Fire ground ruggedized system	Will withstand real life punishment
User choice of systems	Stand-alone or SCBA integrated
High-frequency 2.4GHz RF signal	More direct path to down firefighter, signal not absorbed in walls or smoke
Approximately 300 meters line of sight distance	Extended search distance
Audible and visual indicators	High dBA & bright LED indicators
Easy to operate	Extensive training not required
Extended battery life	More actual use time
Easy to change-out batteries	Limited product servicing
Small durable personal transmitter	Placed anywhere on firefighter
Choice of integrated transmitter	Automatic activation with SCBA
Lightweight hand-held receiver	Easy to operate and maneuver
Available accessories	Truck charger or desktop charger
