

# Confined Space Level 1 Certified Instructor

## Course Description

This program is intended to allow students the opportunity to demonstrate their understanding of confined space safety content, and to prepare them to teach 3M's Confined Space Level 1 program (#6480). Qualified candidates, who possess the skills to teach and manage a classroom environment, will be immersed in this fast paced development program where the Confined Space Level 1 program is dissected by the lead instructor. Candidates will have the opportunity to ask questions and learn the structured course material through practice teaching sessions and workshops.

The course material includes detailed lesson plans, assessment tools, instructor manuals, an administration guide, and access to the slideshow presentation. The course is well suited for any person who has a background in industrial health and safety, has completed 3M's Confined Space Level 2 program, and has experience presenting to groups.

Upon successfully completing the program, graduates will have displayed the knowledge and tools to prepare and deliver the Confined Space Level 1 program to others. The scope of the training certificate provided allows the Certified Instructor the ability to only deliver 3M's Confined Space Level 1 program to individuals seeking confined space training within the applicable regulatory jurisdiction. 3M Safety Training maintains these programs and will provide valid Instructors with ongoing access to updated materials and information.

**Duration: 2-Day Program**  
**Course Code: 7480**

## Course Overview

- Course logistics and requirements
- Course administration
- Adult education principles
- Teaching strategies
- Content knowledge review
- Practice teaching workshops
- Knowledge test and teaching evaluation
- Program updates and support
