Ramp up your team communication.

Enhance safety and streamline operations with crew-wide wireless communication headsets.
We apply the Science of Safety to deliver hearing conservation solutions.

You can’t always rely on a 30,000-foot view of your hearing conservation program to address the complex hazards your crew faces. That’s why 3M is here to help you solve health and safety challenges with resources like our Center for Hearing Conservation that go well-beyond just our quality products.

Hearing Conservation Program Manager

The 3M™ Hearing Conservation Program Manager is a tool to help you efficiently and effectively manage your hearing conservation program. It integrates critical data into one easy-to-use, web-based application to give you complete confidence.

Fit Test Validation

Get results you can trust. The 3M™ E-A-Rfit™ Dual-Ear Validation System provides accurate, quantitative and objective results. And because you can simultaneously test both ears, you’ll have more time to educate employees on the importance of fit and compliance.

Experience & Training

The 3M global hearing team provide valuable on-site training and seminars throughout North America, helping employers and their workers achieve their hearing conservation goals. Whether it’s explaining attenuation ratings or regulations or helping to provide the motivation workers need to comply, 3M trainers are available to help you achieve your hearing conservation program objectives.

Explore the 3M Center for Hearing Conservation at 3M.com/CHC.
What’s a word worth?

In this business, one missed non-verbal communication signal can lead to aircraft damage, injury or worse.

Your crew already has a lot stacked against their success. Snow, rain, wind, loud noise, darkness, moving vehicles and more. In the middle of all that they need to communicate effectively as a team while pushing back planes. The slightest distraction or misinterpretation could be disastrous and costly. What if they could communicate freely during one of the most critical tasks they perform?

Globally, there are 250,000 ramp injuries per year.

Aircraft repair costs due to ramp incidents is $5 billion annually.

Clear communication right out of the gate.

Protect and connect your ramp crew with 3M™ PELTOR™ WS™ LiteCom Pro III Headsets.

Now your push-back teams can have clear and effective communication, even in high levels of noise. Using hearing protectors, wireless communication technologies, and noise-canceling microphones, the tug driver can be in constant contact with the flight deck and wing walkers.

Featuring Environmental Listening Technology, the headsets allow you to hear like normal when it’s relatively quiet, yet provide protection when noise levels increase. Built tough for the working professional, PELTOR headsets are comfortable for all-day wearability and are resistant to rain and dust.

Help protect your crew, your planes and your turn times with 3M™ PELTOR™ WS™ LiteCom Pro III Headsets.

Hearing Protection Plus
► Trusted hearing protection from an industry leader with communication capabilities.

Always in Range
► Features up to 1-mile range and hands-free, voice operated transmission.

Copy That
► Noise-cancelling mic filters out ambient noise.
