Many patients can benefit from additional fluoride, but not all may need or want a high-strength formula. That’s where non-prescription-strength 3M™ Clinpro™ Tooth Crème Anti-Cavity Toothpaste can help.

Featuring 3M exclusive fTCP, this optimized formulation is proven to enhance remineralization by releasing calcium, phosphate, and fluoride – the building-blocks of strong teeth – directly at the tooth surface. Its low abrasive formula is effective but gentle on teeth, blocking dentin tubules in exposed root surfaces for greater comfort.

And it’s safe to be used twice daily in place of regular over-the-counter toothpaste, or as recommended by a dentist, to make fighting cavities that much easier.

**Key advantages**

- Contains 0.21% NaF (950 ppm fluoride ion)
- Contains innovative functionalized tri-calcium phosphate (fTCP)
- Prevents, repairs and reverses early and white spot lesions
- Enables superior remineralization throughout lesions – not just on the surface
- Delivers more fluoride to the tooth surface
- Creates acid-resistant mineral in dentin tubules
- Recharges fluoride-releasing sealants and restorations
- Non-abrasive formula provides gentle, effective cleaning and whitening
- Proven through 10 years of clinical usage
The secret ingredients to a healthy smile

In traditional formulations, calcium and fluoride can combine prematurely in storage and render them less effective.

Our proprietary "smart" ingredient changes the game. It contains calcium and phosphate – the building blocks of healthy teeth, naturally found in saliva – and isolates them from fluoride until brushed on the teeth. Changing the way these critical minerals are delivered enhances their performance for superior remineralization and greater fluoride uptake.

Innovative caries protection – as easy as fTCP.

1. A protective coating around calcium and phosphate prevents early interactions with fluoride.
2. During brushing, saliva breaks down the coating.
3. Calcium and phosphate are released, making them available directly at the tooth surface along with fluoride.
