3M™ Clinpro™ 5000
1.1% Sodium Fluoride
Anti-Cavity Toothpaste

Patient information

Important Patient Information

What is 3M™ Clinpro™ 5000 1.1% Sodium Fluoride Anti-Cavity Toothpaste and what is it used for?

- Clinpro 5000 toothpaste is a prescription fluoride toothpaste.
- It is used as part of a professional program for persons at high risk for cavities to prevent and control tooth decay.
- It is usually used once a day in place of your conventional toothpaste unless instructed otherwise by your doctor or dentist.

How do I use Clinpro 5000 toothpaste?

Place a thin ribbon or pea-sized amount of Clinpro 5000 toothpaste on a soft-bristled toothbrush and brush teeth for at least two minutes. After brushing, adults and children 6-16 years old should spit out the toothpaste. Children 6-16 years old should then rinse their mouth thoroughly with water.

What other information do I need to know about Clinpro 5000 toothpaste?

- Children under 6 years old should not use Clinpro 5000 toothpaste unless recommended by a dentist or physician.
- Do not swallow Clinpro 5000 toothpaste. If more than a pea-sized amount of Clinpro 5000 toothpaste is swallowed, contact your doctor or a poison control center.

Keep out of reach of children under 6 years of age.

- Repeated swallowing of high levels of fluoride may cause chalk-like, lacy markings on teeth (dental fluorosis). For this reason, children with baby teeth (developing dentition) require special supervision to prevent swallowing.
- Always talk to your health care provider before starting any new medications.

Where should I go for more information about Clinpro 5000 toothpaste?

Talk to your dentist or healthcare provider. Go to www.3M.com/dental or call 1-800-634-2249.

You are encouraged to report negative side effects of prescription drugs to the FDA. Call 1-800-FDA-1088 or visit www.fda.gov/medwatch.

Don't change your routine – strengthen it.

Many factors can increase your risk of tooth decay, including:

- High-acid, high-sugar diets
- A history of cavities
- Lost teeth due to cavities
- Orthodontic brackets
- Dry mouth caused by medication or medical conditions

High risk? No problem.

The American Dental Association (ADA) recommends that moderate to high risk patients can benefit from a prescription-strength fluoride toothpaste, like Clinpro 5000.*

But what makes our toothpaste different?

Clinpro 5000 is more than just a toothpaste. Its anti-cavity formula is specifically engineered and scientifically proven to give patients like you the extra protection you need – easily, effectively, and without interrupting your busy schedule.

Read on to see how it works!

* Weyant, Robert J. "Topical Fluoride for Caries Prevention." The Journal of the American Dental Association, vol. 144, no. 11, 2013, pp. 1279–1291.

Innovative toothpaste to make every brush better.

3M™ Clinpro™ 5000 Anti-Cavity Toothpaste provides more fluoride than regular toothpaste to more effectively strengthen your teeth and better protect you from decay.

- Strengthens the entire tooth, not just the surface
- Gently cleans and whitens teeth
- Proven through 10 years of clinical usage
- Contains our innovative anti-cavity ingredient, functionalized Tri-Calcium Phosphate (fTCP)

Available in three great flavors:
**Vanilla Mint, Spearmint
and Bubblegum**

fTCP: The secret ingredient to a healthy smile.

Your teeth are made of minerals – calcium and phosphate – which can break down when exposed to cavity-causing, sugary and acidic food and drinks. Brushing with fluoride toothpaste gives your teeth the minerals needed to rebuild... but not all toothpastes deliver these minerals efficiently.

Clinpro 5000 toothpaste contains functionalized Tri-Calcium Phosphate (fTCP). This special ingredient is designed to deliver calcium and phosphate – the building blocks of healthy teeth – in the most efficient, effective way possible, so they can work with fluoride to strengthen your smile.

Extra protection – as easy as brushing your teeth.

Adding a prescription-strength toothpaste to your routine is easy: it can be used once a day in place of your usual toothpaste, unless directed otherwise by a doctor or dentist.

How to use Clinpro 5000 toothpaste

Just like your normal toothpaste, place a thin ribbon or pea-sized amount of Clinpro 5000 toothpaste on a soft-bristled toothbrush and brush for at least two minutes.

When done brushing, children ages 6-16 should rinse with water. Adults, on the other hand, should wait at least 30 minutes before drinking or eating, to give the fluoride more time to work.

Your examination has revealed the following:

Your specific conditions are shown to the right.

1. Cavities
2. Root Cavities
3. Plaque Build-Up
4. "White Spots"
5. Tooth Sensitivity
6. Gum Disease/Gingivitis
7. Periodontal Disease

General conditions:

- Oral Malodor
- Dry Mouth
- _____
