

# High flow capability; compact design.

The 3M™ High Flow Filter System is a result of 3M's extensive filtration experience applied to delivering high flow filter technology in a compact design. Ideal for those customers who want filtration efficiency and a small footprint.

## High performance media in an innovative design.

3M™ High Flow single round filter system range

3M Compound radial pleat design

'Twist-to-lock' cartridge seating mechanism

#### High flow capability

The 3M™ High Flow Filter System is designed to accommodate flow rates of up to 113m<sup>3</sup>/hr in a single 60" (1524mm) length filter cartridge.

The result? Fewer filter cartridges to maintain your process flow requirements. In fact, 3M High Flow filter systems require as few as one-tenth the number of filter cartridges as conventional 2.5" (63.5mm) outer diameter (OD) filter systems. (see Figure 1).

#### 3M high efficiency filter media in a compound radial pleat structure

3M innovation is at the heart of the 3M High Flow filter. A compound radial pleat design helps maximise the usable surface area of each filter. Blown microfibre forms the basis of the filter media, which is manufactured to tightly-controlled fibre diameter specifications, producing a media with absolute-rated particle retention characteristics. The 3M manufacturing process embosses the media to produce a more uniform pleat pattern, which, in turn, allows greater utilisation of the media by evenly distributing the process fluid throughout the entire filter structure. This results in consistent particle retention in a compact, space-saving design. 3M High Flow cartridge's polypropylene end caps, outer sleeve, and core protect the pleat structure integrity and provide a robust filter construction.

#### Compact system design

Fewer required filter cartridges combined with an outside-to-inside flow path reduces the size of housing required for your application. The 3M High Flow filter housing takes up as little as one-half the size of conventional 2.5" (63.5mm) OD filter cartridge housings for a given flow rate. The result is lower capital investment costs and a compact footprint that saves valuable plant space.

#### Ease of use with twist-to-lock

The 3M High Flow filter system is designed with ease-of-use in mind. From a user-friendly, ergonomically designed handle that makes cartridge installation and removal easier without the use of special tools or other hardware, to a 'twist-to-lock' cartridge seating mechanism that provides a positive seal, the 3M High Flow filter system facilitates easy operation and maintenance of your filter system.

Features	Benefits
High flow capability per cartridge (vs. conventional 2.5" (63.5mm) OD cartridges)	Fewer cartridges required, resulting in:  Reduced cartridge handling and disposal  Reduced filter change-out time  Less individual cartridge seal points, reducing chance of fluid bypass
Compound radial pleat design using 3M blown microfibre polypropylene media	<ul> <li>High filter loading capacity</li> <li>Reproducible filter effluent quality throughout life of filter</li> <li>Broad chemical compatibility</li> </ul>
Compact system design	<ul> <li>Smaller housing minimises capital expense requirements</li> <li>Reduces system footprint</li> </ul>
Easy to use	<ul> <li>No special tools or hardware required for filter change-out</li> <li>'Twist-to-lock' cartridge seating mechanism provides positive seal</li> <li>Ergonomic designed handle facilitates cartridge installation and removal</li> </ul>
Approved for food contact use	<ul> <li>Complies with European regulations (Food Contact Directive (EC) 1935/2004) and US regulations (FDA CFR-21)</li> </ul>

#### **Applications**

#### Industrial

Municipal water, RO prefiltration, reclaimed water, coolants, nozzle protection, boiler condensate

#### Chemical

Quench water, aqueous salt solutions, final products

#### **Petrochemicals**

Waterflooding, produced water, enhanced oil recovery, completion fluids, amine sweetening, final products

#### **Electronics**

RO prefiltration, process water

#### Food and beverage

Process and blending water, D.E. trap filtration, barrel char removal, final bottling

#### **Pharmaceutical**

Process water

### Lower process flow applications

The new High Flow 10" (254mm) filter system allows users to take advantage of all of the benefits of the High Flow technology for lower process flow applications (such as modular water treatment systems and product filling lines).

## 3M™ High Flow Filter Cartridge design features

## 3M™ High Flow Filter System vs. conventional filter system comparison

3M High Flow filter system vs. conventional 2.5" (63.5mm) outer diameter (OD) filter systems comparison basis

- ▶ 40" (1016mm) length cartridges
- ► Fluid viscosity: 1 cP

#### Flow rates per cartridge

- ▶ 6.5" (165mm) OD 3M<sup>™</sup> High Flow Cartridge: 80 m<sup>3</sup>/hr
- ▶ 2.5" (63.5mm) OD conventional pleated cartridge:
- ▶ 2.5" (63.5mm) OD conventional depth cartridge:

## Figure 1: Comparison of required filter cartridges and housing footprint.

#### 80 m<sup>3</sup>/hr System

3M™ High Flow Filter System

diameter housing

2.5" (63.5mm) pleated cartridges

18 Cartridges in a 14" (356mm) diameter housing

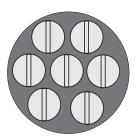

2.5" (63.5mm)

24 Cartridges in a 16" (406mm) diameter housing

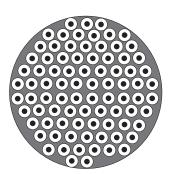

#### 454 m<sup>3</sup>/hr System

3M™ High Flow Filter System

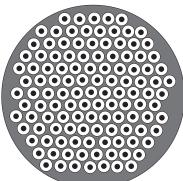

7 Cartridges in a 24" (610mm) diameter housing

2.5" (63.5mm) pleated cartridges

85 Cartridges diameter housing 2.5" (63.5mm)

120 Cartridges in a 36" (914mm) diameter housing

#### The bottom line

- ► The 3M<sup>™</sup> High Flow Filter System requires 90% fewer cartridges than conventional 2.5" (63.5mm) OD cartridge systems for a given flow rate
- ► 3M High Flow filter housings are 33% to 50% smaller than filter housings for conventional 2.5" (63.5mm) OD cartridges for a given flow rate
- ► Fewer filters and a user-friendly housing design mean easier and faster filter change-outs

## 3M™ High Flow Filter Cartridge specifications

#### Materials of construction

#### Filter media

Each grade of 3M High Flow filter is manufactured from food contact compliant meltblown polypropylene microfibre media, providing high particle removal efficiency with broad chemical compatibility. No adhesives, binders or silicone are used in the manufacturing process. All support layers are constructed with polypropylene.

#### **O-rings**

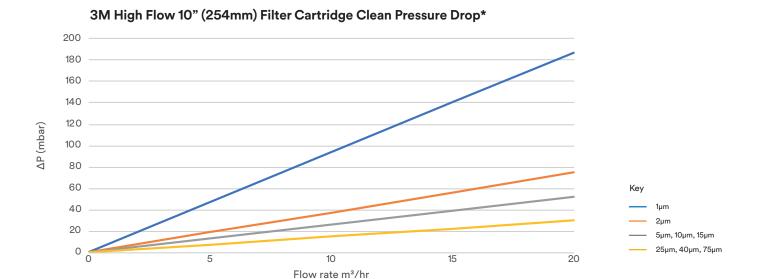

O-rings are available in a variety of materials to suit your application including the standard nitrile, ethylene propylene rubber (EPR), silicone and fluorocarbon.

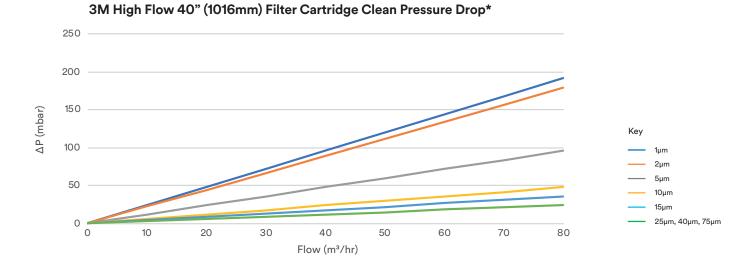

Cartridge length							
Nominal	10" (254mm)	40" (1016mm)	60" (1524mm)				
Construction							
subsolute rating (microns) 1, 2, 5, 10, 15, 25, 40, 70							
Filter media, center core, end caps, outer sleeve		Polypropylene					
Sealing o-ring options	Nitrile, ethylene pr	opylene rubber (EPR), silic	one, fluorocarbon				
O-ring size/end cap connection		3" NB (76.2mm)					
Cartridge dimensions							
Inside diameter (nominal)		3" (76.2mm)					
Outside diameter (nominal)	6.5" (165mm)						
Operating conditions							
Maximum recommended flow rate in water (@20° C)	19.3m³/hr	80m³/hr	113m³/hr				
Maximum continuous operating temperature		71°C (160 °F)					
Maximum hot water sanitisation temperature		90°C (194 °F)					
Maximum forward differential pressure		3.4 bar @ 20°C					
Recommended change-out differential pressure		2.4 bar @ 20°C					
Clean pressure drop		See page 7					
Regulatory							
FDA CFR-21 Listed materials of construction	✓	✓	✓				
Food Contact Directive (EC) 1935/2004	✓	✓	✓				

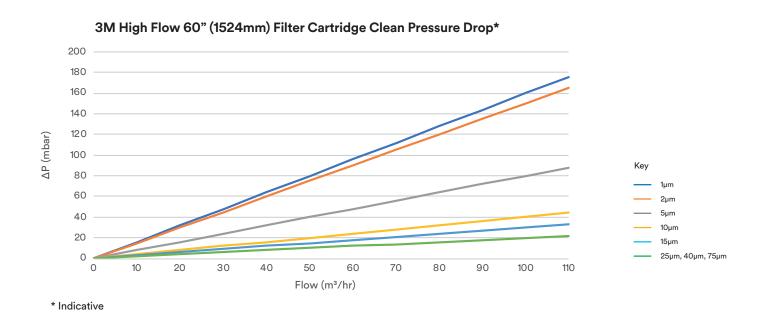

Fluid compatibility					
Chemical	Temperature	Chemical	Temperature	Chemical	Temperature
Acetic acid 20%	71°C	Hydrogen peroxide	38°C	Sodium carbonate	71°C
Alkanolamines	60°C	Methyl ethyl ketone	21°C	Sodium hydroxide 70%	71°C
Ammonium hydroxide	71°C	Mineral oil	21°C	Sulphuric acid 20%	71°C
Bleach 5.5%	49°C	Nitric acid 20%	49°C	Sulphuric acid 70%	71°C
Ethylene glycol	71°C	Potassium hydroxide	60°C	Urea	71°C

The thermal and chemical resistance data presented in this brochure is for guidance only. Factors such as duration of exposure, fluid concentration and temperature should also be considered. Thermal and chemical resistance should also be considered when choosing all materials exposed to fluids.

## 3M™ High Flow Filter Cartridge specifications

## 3M™ High Flow Filter Housings

3M High Flow filter housings are specifically designed to deliver all of the system's benefits in a compact footprint in your production site. The range is constructed from 316 grade stainless steel (wetted parts in contact) and has a maximum allowable working pressure of 10 barg for use with temperatures up to 120°C (110°C for 01HFN Coreline single cartridge housing only).

#### **Pressure Equipment Directive** 2014/68/EU

3M High Flow filter housings are fully compliant with and built to PED 2014/68/EU Article 4.3 'Sound Engineering Practice' as standard.

#### ATEX Directive 2014/34/EU

The 3M High Flow filter housings are ATEX approved as standard for use in ATEX condition II 2 GD c IIC/IIIC.

#### Marking and documentation

The housings are clearly marked and delivered with a EN10204 Certificate of Comformity 2.2. The user of these housings must ensure that they are used in accordance with the requirements of these PED and ATEX directives at all times, and in accordance with the instruction manual supplied.

#### Food Contact Directive (EC) 1935/2004

The housings are constructed from 316 and 316L stainless steel (wetted parts in contact) and delivered with O-rings that are compliant to FDA 21CFR Part. 11 (there are no other non-316 parts in contact).

#### Design

In addition to the standard 01HF Coreline single cartridge housing range, 3M High Flow filter housings can be built upon request to a wide range of specifications and design and construction standards. These routinely include PED Category IV and for use with Hazardous (Group 1) liquids and Gas/Vapour.

Design and constructions codes can include (but are not limited to) EN13445, AD Merkblatter, ASME Div VIII & U Stamp and CODAP. Materials can include in addition to 316 (but not limited to) 304 and Uranus B6 Super Duplex steels.

Please contact your 3M representative for any other classification or further information.

#### Features and benefits

#### Compact design

- Smaller housing minimises capital expense requirements
- Reduces system footprint

#### Robust cartridge centre-post design

 Eliminates bulky support plates providing easy access to housing internals

#### Manufactured from 316 or 316L stainless steel

► Excellent corrosion protection (carbon steel option available in multi-element housing)

#### **Upstream gauge ports and drains**

- Hinged cover (single-round housings) and user-friendly cover lifting device (multi-round housings)
- ► For easy element change-outs

3M™ High Flow 01HF Coreline Filter Housing Range

				Total legs height	32¹				

#### Note: All dimensions approximately for guidance only. Maximum height.

#### Housing flow / pressure drop curves\*

<sup>\*</sup> Indicative

Maximum flow rate based on nozzle size. Not applicable.

With legs.

Without mounting legs. This allows the operator to make their own arrangements for mounting the housings in their installation however they feel most suitable. A set of standard mounting legs for these are available as an optional accessory and can be obtained separately. The one design of mounting legs fits 40" and 60" vessels. Leg assemblies for the housing for the 40" housing in the vertical orientation are available as a spare.

## **Ordering guides**

## High flow filter housings for multi-cartridge and special applications

#### Bespoke design and build projects

The 3M Hardware team have extensive experience in designing bespoke housings for filter applications. They can produce them to a wide variety of design and construction codes (including ASME U Stamp). Bespoke housings can range from simple modifications of standard designs up to large multiple housing skid mounted units with associated accessories and with both second shell heating jackets and electrical trace heating.

Bespoke 3M High Flow filter housings can be produced from single cartridge units up to housings holding 40 cartridges each. The operating conditions for the housings can be configured to handle liquids at pressures and temperatures according to the customer's specific needs.

#### PED 2014/68/EU

Bespoke 3M High Flow filter housings are routinely produced for categories up to and including PED Cat IV. These can be for applications using Group 1 (Hazardous) Gas and Vapour products at high temperature and pressures as needed.

#### Design and construction codes

Design and constructions codes used routinely include (but are not limited to) EN13445, AD Merkblatter, ASME Div VIII & U Stamp, and CODAP. This includes full Non Destructive Testing (NDT) including dye penetrant and X-ray inspections as specified by the code used.

#### Materials of construction

Materials used routinely include in addition to 316 (but not limited to) 304 and Uranus B6 Super Duplex steels.

<sup>\*\*\*</sup>Flange size will vary with number of filter cartridges and cartridge length.
