COVID-19 Pandemic

Summary

The World Health Organization (WHO) declared the outbreak a pandemic on March 11, 2020. COVID-19 continues to spread globally impacting millions of lives, overwhelming health systems, and affecting global economic and social domains. As the world continues to learn more about the SARS-CoV-2 virus and works to vaccinate people as quickly as possible, technical guidance on responding to the pandemic continues to evolve. It is recommended to consult the latest guidance and local recommendations frequently for the most updated information to continue to respond to the pandemic and help prevent the spread of COVID-19.

COVID-19

People of any age can become infected with COVID-19. Some may develop no symptoms of disease whereas others can become severely ill and develop serious complications that can lead to death. COVID-19 infection can result in a wide range of symptoms with fever, dry cough and fatigue being most common. Most people who get COVID-19 recover, but those who are over 60 years of age and those with underlying medical conditions are at higher risk of developing severe illness (WHO).

Transmission

The SARS-COV-2 virus that causes COVID-19 can be spread from person to person via close contact through exposure to exhaled particles that contain SARS-CoV-2 virus. When people breathe, talk, cough, or sneeze they produce particles in a range of sizes from larger droplets to smaller aerosolized particles that can remain suspended in the air for minutes to hours. Infection can occur when these particles are inhaled or get into a person’s mouth nose or eyes. Less commonly, the virus may possibly be spread after people touch contaminated surfaces and then touch their nose, mouth or eyes. Under certain circumstances, such as being in an enclosed space with others for extended periods of time without adequate ventilation, infections can also be spread to those who are not necessarily in close contact with an infected person when smaller particles remain in the air for longer periods of time. This is known as aerosol or airborne transmission and more studies examining this mode of transmission are underway (WHO, CDC). It is important to note that people who are infected but may not have symptoms can also spread the virus to others. Multiple new variants of the SARS-CoV-2 virus have emerged as the virus mutates over time. These variants may spread more easily between people and are being studied to learn more about controlling spread. Recommendations and guidance for controlling the spread of COVID-19 and responding to the pandemic adapt as the situation evolves and more data become available. It is recommended to consult the World Health Organization (WHO), U.S. Centers for Disease Control and Prevention (CDC) websites, along with other resources and local public health guidance frequently for the most up to date information.

Recommendations

Members of the General Public

Consult applicable guidance for the general public from WHO, U.S. CDC, or your local health authority. At this time WHO has not made any recommendations for personal protective equipment (PPE) use by the general public, including respirators.

Coronavirus disease (COVID-19) advice for the public (WHO)
Toolkit for General Public (U.S. CDC)

Healthcare

The WHO and the U.S. CDC have published infection prevention guidance intended for healthcare workers, healthcare managers and teams working in infection prevention and control.

Infection prevention and control during health care when novel coronavirus (nCoV) infection is suspected (WHO)

Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings (U.S. CDC)

These organizations have also offered guidance for organizations facing a shortage of respirators during this pandemic.

Rational use of personal protective equipment for coronavirus disease 2019 (COVID-19) (WHO)

Strategies for Optimizing the Supply of N95 Respirators (U.S. CDC)

Healthcare workplaces should also review recommendations and requirements from the applicable regulatory body for their jurisdiction, such as the US Occupational Health and Safety Administration (OSHA).

Non-Healthcare Workplaces

The WHO and the U.S. CDC have also published guidance for non-healthcare businesses and workplaces.

Country and Technical Guidance – Coronavirus disease (COVID-19) (WHO)

Guidance for Businesses and Employers Responding to Coronavirus Disease 2019 (COVID-19) (U.S. CDC)

Employers should also review recommendations and requirements from applicable regulatory body for their jurisdiction, such as the US Occupational Health and Safety Administration (OSHA), and other health authorities.

3M Resources

3M is committed to supporting the public health and global response to the COVID-19 pandemic and helping to solve complex health and safety challenges. 3M offers a wide variety of tools and resources including technical guidance, education and training to support workplace safety and personal protective equipment (PPE) needs.
