Description
Whenever filtering facepiece respirators are used – such as those with N95, FFP2, or similar filtration performance – it’s important to follow the model-specific user instructions for each particular respirator model. The following additional resources are available to help train and educate employees on how to correctly put on and use 3M filtering facepiece respirators.

The general steps for using filtering facepiece respirators are:

1. Put on the respirator, using both straps (pre-stretch straps for model 8210)
2. Use two fingers from each hand to form the noseclip firmly to your nose (do not use only one hand, and do not pinch; a pinched noseclip might leak)
3. Check the position in a mirror or ask a friend if you have put it on properly and adjust if necessary
4. Conduct a user seal check (fit check) according to the user instructions
5. If any leaks are detected, adjust the fit or, if you can’t get a good seal, look for another respirator model that fits you better

If filtering facepiece respirators or surgical respirators are used during care for patients with a suspected or confirmed case of an infectious disease, the respirators should be carefully removed, touching only the straps and not the surface of the facepiece portion, and then appropriately discarded immediately after use, according to applicable waste disposal practices.

In many countries, employers are required to train workers when respirators are used at work. The videos, instruction sheets, and posters linked below can help users put respirators on properly and understand other aspects of use, and may be used as a training resource.

If you do not see your respirator model listed below, please perform these steps to find the relevant resources:

2. Select your country and language from the list.
3. Once your local 3M web page loads, enter your respirator model into the search bar on the upper right.

⚠️ WARNING

Respirators help reduce exposures to certain airborne contaminants. Before use, the wearer must read and understand the User Instructions provided as a part of the product packaging. Misuse may result in sickness or death. For correct use, consult supervisor and User Instructions, or call 3M PSD Technical Service in USA at 1-800-243-4630 and in Canada at 1-800-267-4414.
