

## 3M™ M\*Modal Fluency Direct compatibility with Epic

- Create time to care with closed-loop clinical documentation
- Combine documentation creation and CDI into one workflow with CAPD
- Capture meaningful information from every patient encounter and turn it into actionable intelligence

### The 3M advantage

The combination of 3M and M\*Modal allows us to use our strengths to close the loop between care and revenue integrity.

The 3M speech understanding technology is designed to optimize the EHR experience, drive higher quality documentation and enable physicians to spend more time with their patients.

### Call today

### Proactive feedback, clinical insights and real time CDI

Cloud-based 3M™ M\*Modal Fluency Direct is engineered specifically for the needs of Epic Hyperspace, Haiku, Canto, Rover, Radiant and Beaker users. 3M Fluency Direct's guaranteed support of these Epic applications incorporates 3M M\*Modal speech understanding and artificial intelligence (AI)-powered computer-assisted physician documentation (CAPD) functionality. Built-in CAPD delivers proactive feedback and clinical insights to physicians for real time clinical documentation integrity (CDI). The goal is to use speech-enabled options to drive smarter, more unified documentation workflows within the electronic health record (EHR), thereby creating time to care and optimizing the user experience.

Compatibility of 3M Fluency Direct with Epic enables direct dictation, single sign-on and the use of a robust library of commands. CAPD provides users with automated feedback at the point-of-care based on the content of notes created via SmartPhrases, SmartText, templates, typing or front-end speech recognition. This high value feedback is configured in 3M's cloud-based AI and natural language understanding platform to support CDI, ICD-10 and documentation best practice.

Haiku and Canto help create documents on-the-go by using 3M M\*Modal technology with the same speech profile as utilized by 3M Fluency Direct on the desktop to improve accuracy and efficiency. The 3M integration with Haiku Voice Assistant allows physicians to speech-enable everyday tasks such as looking up schedules, lab results, previous notes and more.

Epic Rover can use embedded cloud-based technology so that nurses can use speech recognition to create task reminders and enter notes. Virtual deployments of Epic are also supported by 3M Fluency Direct for full functionality. The 3M solution can be installed locally at a facility while still having full speech and CAPD support over Citrix®, VMWare® Horizon View, etc.

Partial dictation, when utilized with 3M™ M\*Modal Fluency for Transcription, gives physicians the option for front-end speech recognition and transcription-supported workflows, thereby providing a stepping stone from an all-transcription to a full real time speech recognition workflow.
