Designed for strength and versatility.

3M™ Durapore™ Surgical Tape

Reliable adhesive technology for a variety of applications.

When you need to keep a tube, device or bulky dressing securely in place, you need adhesive strength you can count on. Durapore Surgical Tape is a high-strength, no stretch tape that gives you confidence in your securement applications.

Strong adhesion
Good initial and long-term (72 hour) adhesion to dry skin.

Easy to use
Tape can be torn lengthwise and crosswise to create a variety of sizes as needed.

Adheres to dry skin, tubes, devices and itself.

Reduce waste
Single-patient-use rolls of medical tape can help reduce wasted tape. With traditional tape rolls, up to 85% can be wasted.¹

Why choosing the right tape matters

In one study, 48.5% of patients had a nasogastric tube dislodgement.⁶

¹ Duraporedr is a conforming surgical tape that provides confident, high-strength holding power to keep dressings, catheters and tubes in place. Duraporedr is also easier to use than traditional surgical tapes. Single-patient use rolls help reduce waste by up to 85% compared to traditional surgical tapes. Duraporedr is a durable, non-stretch, conforming surgical tape that is easy to use and adheres to dry skin, tubes, devices and itself.

3M™ Durapore™ Surgical Tape

High-strength securement

Clinical applications such as:

- Urinary catheters
- Nasogastric tubes
- Orogastric tubes
- Patient positioning
- Short-term securement of endotracheal tubes
  - For use in dry conditions
  - Not recommended for use when excessive fluids and/or secretions are present
  - Tape securement and tube position should be monitored routinely

Consider a barrier like 3M™ Cavilon™ No Sting Barrier Film with Durapore Tape (per facility protocol).

Tape material: Silk-like cloth. Not made with natural rubber latex.
