

Background

3M supplied 3M filtering facepiece respirators manufactured in Asia to the U.S. Federal Emergency Management Agency (FEMA) in response to a rated order issued under the U.S. Defense Production Act (DPA). These respirators were imported to the U.S. by FEMA in order to assist in the response to the COVID-19 pandemic, subject to emergency use authorization by the U.S. Food and Drug Administration (FDA). **On June 30, 2021, the FDA announced the revocation of the Emergency Use Authorizations (EUAs) for non-NIOSH approved respirators from China and other countries outside the US due to multiple factors including the increase in availability of NIOSH approved respirators.** This revocation was effective July 6, 2021, and affects the emergency use authorization of such respirators by healthcare personnel in healthcare settings. Visit www.FDA.gov for additional information. **In addition, on July 7, 2021, The US Occupational Safety and Health Administration (OSHA), the agency that regulates selection and use of respirators in the workplace, rescinded its temporary enforcement discretion memorandum,** stating that “...circumstances precipitating the issuance of OSHA’s respiratory protection enforcement discretion memoranda no longer exist. Therefore, where respirator supplies and services are readily available, OSHA will cease to exercise enforcement discretion for temporary noncompliance with the Respiratory Protection standard based on employers’ claims of supply shortages due to the COVID-19 pandemic.” For more information about the effort to import these products into the U.S. and the U.S. regulations that apply, visit 3m.com/airlift
