

Fluency Mobile and athenahealth®

Fluency Mobile

INTRODUCTION

- M*Modal Fluency Mobile integrates with athenahealth to produce medical documentation for insertion into athenaClinicals® and athenaOne® for hospitals and health systems
- This saves providers time through the use of transcription services for more complex and verbose sections of the patient visit
- Provides easy selection of the patient visit through a picklist
- Ensures accurate placement of the transcribed text within the specific section of the visit being dictated or as a full document attached to the patient's chart within athenaClinicals® and athenaOne® for hospitals and health systems

TECHNOLOGY THAT DRIVES QUALITY IMPROVEMENTS

Ensures quality improvements start at the time of dictation:

- Physicians save time dictating by selecting the patient from a picklist
- Patient demographics are accurate right from the start
- Blanks are reduced and TAT (turnaround time) is improved due to high quality audio
- Section headings are presented as a visual guide for corresponding sections within athenaClinicals® and athenaOne® for hospitals and health systems
