Take control with universal decolonization.

Before COVID-19, nasal decolonization was reserved for high-risk patients. Today it’s recommended for every patient.

3M™ Skin and Nasal Antiseptic helps reduce the risk of SSIs when part of a comprehensive preoperative protocol.

Why is this more important now?

Taking every precaution to ensure the safety of your patient is more important now than ever. Universal decolonization is proven to reduce risk factors that can lead to SSIs.

Take control with universal decolonization.
