

3M M*Modal virtual assistant technology embedded with Epic

- Saves time and prevents physician burnout by enabling clinicians to conversationally access relevant patient information and complete documentation tasks within the EHR
- Reduces the administrative burden on clinicians and gives them time back with their patients
- Gives clinicians a seamless virtual assistant experience across Epic mobile and desktop applications

The 3M advantage

The combination of 3M and M*Modal allows us to use our strengths to close the loop between care and revenue integrity.

The 3M speech understanding technology is designed to optimize the EHR experience, drive higher quality documentation and enable physicians to spend more time with their patients.

Transform the clinician experience with the EHR

The 3M M*Modal virtual assistant that powers the Hey Epic! Voice Assistant transforms clinician interactions with the electronic health record (EHR). Having this virtual assistant reduces the administrative burden, increases efficiency and allows clinicians to focus on the patient instead of a computer screen when delivering care.

The 3M M*Modal assistant technology is also integrated with Epic Hyperspace, Haiku and Rover, giving clinicians a seamless experience across multiple devices and workflows. This technology enables clinicians to conversationally interact with their EHR to easily complete routine tasks, including:

- **Information lookup:** Conversationally search the patient chart to look up information including vitals, medication lists, recent visits, notes and care gaps.
- **Documentation tasks:** Quickly and easily place orders, capture notes and complete EHR documentation by dictating directly into the EHR through freeform speech.
- **Easy EHR navigation:** Completely transform the way clinicians experience and interact with the EHR with intuitive, conversational workflows.

Built on 3M's powerful AI platform

The technology is built on the cloud-based 3M conversational artificial intelligence (AI) platform and uses advanced AI and speech understanding to drive higher quality documentation. The advantages of 3M's AI platform include:

- A fully speech-driven workflow with built-in computer-assisted physician documentation (CAPD) functionality
- An efficient capture of complete and accurate patient information, anywhere clinicians work
- A completely secure and reliable transmission of patient information
