

## 3M™ 360 Encompass™ System

- Produce accurate and complete coded data that promotes quality patient care with the help of computer assisted coding and clinician documentation workflow
- Improve workflow efficiency through greater collaboration between coders and clinical documentation improvement (CDI) specialists

### Introducing 360 Encompass System

Built on 3M's logic for coding, grouping and reimbursement, the 360 Encompass System for Australia will leverage 3M's natural language processing (NLP) with our platform's blend of statistics and rules to automate coding and clinical documentation improvement. The system offers users multiple workflows, integration between coder and CDI teams, numerous reporting capabilities and embedded quality indicators such as hospital acquired complications.

#### Benefits:

- Integrates with 3M™ Codefinder Software, EMR and PAS
- Provides a single, unified “one-stop shop” for all electronic and scanned documents required for coding and relevant to the episode, thereby eliminating the need to access multiple systems and minimising the time the coder spends searching and navigating the information
- Makes use of the EMR by annotating (highlighting) disease and procedural terms within the electronic document assisting the coder in their process of abstracting from the EMR and allowing the coder to click on the annotated terms to expedite their current process of coding with the 3M Codefinder Software
- Provides word searches and cross references throughout the electronic documentation to assist in finding the appropriate information
- Provides clinical documentation improvement edits to alert the coder where code specificity may need to be queried with the clinician
- Provides a mechanism to create and store coder clinician queries and to track the coding or DRG change that comes with a clinical documentation improvement program
- Facilitates a clinical documentation improvement program by allowing a user to derive a concurrent DRG at the beginning of a patient visit, identify documentation deficiencies that impact patient care in real time and report on financial impact of the CDI program
- Enables effective and immediate communication between coders, CDI specialists, and quality teams. CDI reviewers and coders can easily flag visits, notify the other party and track clinician queries/communication
- Provides a list of role-specific, dashboards tracking productivity, daily worklists and reporting capability
- Provides the platform for future functionality including autosuggested coding, autosuggested CDI queries and health care analytics.

### Why choose the 3M 360 Encompass platform?

The 3M 360 Encompass System has been implemented in more than 2000 sites in the United States since its introduction in 2011, resulting in:

- Improved coder productivity;
- Improvements in DRG assignment accuracy and Casemix Index (CMI);
- Reduction in patient safety issues such as hospital acquired complications;
- A reduced dependency on outsourced coders; and
- A reallocation of coders time to clinical documentation improvement, quality, audit activities, analytics and data utilisation.
