Negative pressure wound therapy you can trust

Discover the value of 3M™ V.A.C. Therapy, now with 3M™ Dermatac™ Drape
V.A.C.® Therapy with SensaT.R.A.C. Technology can:

- Sense pressure changes at the wound site.
- Regulate and maintain pressure as conditions change. (e.g., change in head height, patient position, viscosity of exudate, etc.)
- Detect blockages below the canister site and notify clinicians with alarms when target pressure is not achieved.
- Force air into the system to help reduce blockages. (i.e., 3M™ Easyclear Purge™ Technology)

3M™ SensaT.R.A.C.™ Tubing
SensaT.R.A.C. Tubing efficiently draws exudate away from the wound and independently monitors target pressure through multi-lumen tubing.

3M™ SensaT.R.A.C.™ Pad
The SensaT.R.A.C. Pad in conjunction with SensaT.R.A.C. Technology, helps maintain pressure.
Conclusions

3M™ V.A.C.® Therapy integrated with 3M™ SensaT.R.A.C.™ Technology was shown in bench testing to:

- Demonstrate improved performance in monitoring negative pressure delivery at a simulated wound site and notifying users if blockages exist that could prevent the programmed negative pressure from being delivered to the simulated wound site.
- Attempt to overcome blockages by increasing negative pressure at the canister.
Introducing 3M™ Dermatac™ Drape

3M™ Dermatac™ Drape is the first ever silicone-acrylic hybrid drape for use with 3M™ V.A.C.® Therapy. The Dermatac Drape hybrid composition unites the necessary properties of soft and skin friendly, with strong, stable adhesion to provide the ideal balance for wound healing support.

Now you can provide wound healing support for V.A.C.® Therapy patients with the dual benefits of adhesive acrylic and forgiving silicone.

Dermatac Drape introduces a new class of drape by combining both acrylic and silicone adhesive properties to overcome limitations of traditional adhesive drape technology.

1. High tack-acrylic will cure to patient up to 20 min after placement, allowing repositionability in this timeframe.

2. Silicone allows for greater contact with skin, filling any gaps at placement and potentially reducing leaks.

The precise combination of acrylic and silicone allows for an ideal balance for wound healing support, leading to significant benefits related to:

- Sealing and repositionability upon initial placement.
- Less time at dressing changes, improved ease of use, and less waste.
- Kind to patients’ skin and minimizes discomfort.

Apply with ease

Figure 1. Acrylic is a stiffer adhesive and adhesion builds over time, potentially leaving gaps between drape and skin at initial placement.

Figure 2. Silicone is a softer adhesive, rapidly filling gaps at placement.
Seal in the heal

With Dermatac Drape you can rely on a strong and effective seal for negative pressure wound therapy.

In a simulated wound model (n=5), Dermatac Drape with 3M™ V.A.C.® Therapy maintained a seal in 100% (5/5) of samples vs. Mölnlycke’s Avance® Film with Safetac® technology which failed to maintain a seal in 80% (4/5) of samples².

Remove with kindness

With its low tack adhesive properties Dermatac Drape is strong enough to maintain a seal for V.A.C.® Therapy, yet gentle enough to help take the pain out of dressing changes.

Patients (n=5) observed that V.A.C.® Therapy with Dermatac Drape was more comfortable both when worn and during dressing changes compared to standard drape³.

Impact of adhesive properties on skin at drape removal

The full periwound skin contact provided by traditional high-tack acrylic drapes (shown in Figure 3.) can deform skin upon removal.

Dermatac Drape has less acrylic contact with periwound skin due to its perforated silicone layer allowing the softer, more flowable silicone to deform at removal instead of the patient’s skin.

100% (n=17) of patients agreed that Dermatac Drape was painless upon removal⁴

- Dermatac Drape was placed on 17 patients over a 2-week period, with dressing changes every 48 to 72 hours.
- At dressing changes patients were asked how Dermatac Drape felt upon removal.
Failure to heal a wound effectively can lead to higher overall cost of care

Cost savings in the acute setting
A retrospective observational database study of 21,638 patients (3M n=18,385, Competitor n=3,253) was conducted by Premier Research Services (PRS) to evaluate the costs and readmission rates of Negative Pressure Wound Therapy (NPWT) patients* at facilities using 3M NPWT vs. Competitor NPWT Therapies.

Analysis of 3M NPWT vs. Competitor NPWT

<table>
<thead>
<tr>
<th>Average length of stay (Days)</th>
<th>All-cause inpatient re-hospitalization (within 30 days of discharge)</th>
<th>Average hospital charges (per patient)</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Graph" /></td>
<td><img src="image2.png" alt="Graph" /></td>
<td><img src="image3.png" alt="Graph" /></td>
</tr>
</tbody>
</table>

*Each patient received at least 1 charge for NPWT. Competitor hospitals include all Non-3M NPWT hospitals.

Total cost of care

- Total cost to treat (in addition to wound closure) is important for evaluating cost effectiveness of wound care products and services.
- Failure to heal a wound effectively can lead to overall higher costs to treat.
- In addition to randomized control trials and clinical papers, analysis of real world expenditure data can provide insights into cost effectiveness of wound care therapies.
Cost savings in the out-of-hospital setting

Retrospective analysis of U.S. insurance claims database compared total and wound-related costs for 15,180 patients who received 3M™ V.A.C.® Therapy versus competitor NPWT in the outpatient setting between January 2016 and September 2018. Costs were compared across care settings and wound types at 30 days, 3 months, and 12 months after initial claim.6

- 3M™ V.A.C.® Therapy patients had lower total and wound related costs across all time periods and across all wound types at 12 months.
- V.A.C.® Therapy patients experienced shorter average length of therapy and were less likely to be switched to another supplier.
A world leader in skin and wound care right by your side
As your partner, we’re here to help you help your patients. When we combine our science with your expertise, amazing things happen.

Science-based solutions
3M products are trusted in more than 60,000 hospitals, and businesses worldwide. Our comprehensive portfolio of advanced wound care solutions is supported by clinical evidence across new and growing categories—including dressings, disposables, and digital technology and connectivity.

Ongoing support
From ordering to placement and therapy through patient discharge, our clinical and technical support is seamless, efficient, and available when you need it.

World-class education
We act as an extension of your team - empowering you with hands-on training and free, award-winning medical education available live and on demand at: www.3m.com/3M/en_US/medical-us/3m-medical-education/

3M reimbursement education hotline
Specialists assist with insurance coding, coverage guidelines, and other reimbursement information. Call: 1-800-668-6812 (Available from 7am - 6pm CST) E-mail: ReimbursementEducation@mmm.com
