The 3M advantage

3M has been a trusted partner for more than 35 years in protecting the privacy and confidentiality of patient records. As a 3M client transitions from traditional, on-premises support to cloud-based products, 3M will provide the security and application management that clients have come to expect in cloud solutions.

The challenge: Moving to a cloud-based solution

Upgrading technology systems is vital to achieve greater efficiency and cost reduction, however, health care organizations have traditionally been cautious in managing technology because of the intense financial and resource commitments required. Safely and efficiently transitioning to a cloud-based management system can be a challenge if organizations don't have the right resources and team in place. The 3M Cloud Platform helps with this transition, making security, performance and reliability a priority. 3M has the right expertise and experience to help clients seamlessly move to a cloud-based solution.

The solution: A flexible approach to application management

3M applications in the cloud deliver a secure solution that includes the following key benefits.

- **Security.** Patient information is safe and secure with 3M's encryption of all data in transit and at rest.
- **Operational efficiency.** 3M takes ownership of the application environment and process management, allowing IT resources to focus on more strategic initiatives.
- **Decreased downtime.** Web technology delivers content with improved timeliness and reduced maintenance, resulting in less user downtime.
- **Cost transparency.** No hidden costs, no unexpected hardware purchases.
- **Performance.** Application performance is equal to or better than average on-premises customers with no change in functionality.

To help health care organizations transition smoothly into a cloud-based system, 3M provides a clear path forward with strong customer support.
