The first-ever silicone-acrylic hybrid drape for use with 3M™ V.A.C.® Therapy
Apply with ease

conforms to different anatomical locations and can be repositioned

Clinicians using 3M™ Dermatac™ Drape during a 5-patient case study, noted that the hybrid drape was easy to place and readjust upon initial placement, improving the ease of dressing changes.¹

Intelligently conforms and contours

- Adapts to the body and provides a tight seal - even in uneven areas
- Conforms to different anatomical locations and can be repositioned upon initial placement

Saves time for clinicians

- Less training as drape is easier to apply

Reduction 33% in dressing application time compared to standard 3M™ V.A.C.® Drape²³

User-friendly handling for reduced waste

- Detaches without difficulty when stuck to gloves or itself
- Easy to smooth out wrinkles and reposition during dressing application without loss of adhesion

75% of clinicians (18/24)⁴ found that with Dermatac Drape there was...

- LESS drape needed at dressing changes
- LESS need to window pane
- NO need for ancillary products to help with seal

⁴ KCI. CLINICIAN SURVEYS. MAY 17, 2019.
Seal in the heal

maintains a highly-effective seal for wound protection

With 3M™ Dermatac™ Drape you can rely on a strong and effective seal, optimal for healing support.

Provides a seal you can trust

- Helps provide peri-wound protection
- Acts as a barrier to external contaminants

In a simulated wound model (n=5), Dermatac Drape with 3M™ V.A.C.® Therapy maintained a seal in 100% (5/5) of samples vs. Mölnlycke’s Avance® Film with Safetac® technology which failed to maintain a seal in 80% (4/5) of samples.

Feel confident with a drape that can be left in place for 72 hours

- Maintains a moist wound healing environment that favors the healing process

  - Infected wounds should be monitored closely and may require more frequent dressing changes than non-infected wounds, dependent upon factors such as wound conditions and treatment goals

8. KCI. Wounds treated with DERMATAC™ dressings show evidence of re-epithelization in split and full thickness wound models. Sept 2018.
Remove with kindness

skin-friendly removal supports optimal healing and patient comfort

The results from a 5-patient case study suggest that the use of 3M™ Dermatac™ Drape may improve the patient experience when using NPWT by helping alleviate pain at drape removal and by helping to mitigate periwound skin irritation.7

Supports the healing process

- Gentle to the skin and provides peri-wound protection

- In a 2 porcine animal study, split thickness wounds were created on the dorsum and managed with V.A.C. Dermatac Drape as part of the 3M™ V.A.C.® Therapy System with wounds being treated for 5 days. At the end of the animal study wounds demonstrated evidence of re-epithelization with or without a dressing change at day 3 (n=3 per group, 4 groups total, 24 wounds).

- Wounds treated with V.A.C. Dermatac Drape showed evidence of re-epithelization.9

Improves patient comfort

- 100% (n=17) of patients agreed that Dermatac Drape was painless upon removal7
  - Dermatac Drape was placed on 17 patients in Chile over a 2-week period, with dressing changes every 48 to 72 hours.
  - At dressing changes patients were asked how Dermatac Drape felt upon removal.

- A retrospective review of 46 dressing changes highlighting patient assessments of pain at dressing changes found that patients (n=27) reported lower pain scores on average (2.23 ± 2.0) compared to a previous comparative study indicating a mean score of 6.5 when traditional drapes and foam were used (Fraccalvieri 2011).10,11

Introducing
An innovative mix to support the next level of healing

Provide wound healing support for your patients receiving 3M™ V.A.C.® Therapy with the dual benefits of adhesive acrylic and forgiving silicone

3M™ Dermatac™ Drape utilizes the precise combination of acrylic and silicone for an ideal balance

- Acrylic (inside the circles) helps provide a tight seal to protect wounds on different anatomical locations
- Silicone (outside of the circles) allows for repositioning and gentle removal

“The ability to easily reposition Dermatac Drape saves the clinician significant time and reduces the amount of wasted drape.”

– Dr. Ralph J. Napolitano, Jr., DPM, CWSP, FACFAS, OrthoNeuro, Columbus, Ohio

Dermatac Drape adheres to a variety of anatomical locations
Clinicians and patients can benefit from the innovative features of Dermatac Drape

Apply with Ease: conforms to different anatomical locations and can be repositioned at initial placement

Seal in the Heal: maintains a highly-effective seal for negative pressure

Remove with Kindness: skin-friendly removal supports optimal healing and patient comfort
