

CAREER CAPERS

Alexander

Embedded Software Developer

Most of my time involves programming in some form or another.

My typical activities are things like researching, designing, implementing, testing and managing software code for my company's different embedded devices and systems.

I basically do what others might call 'magic' - bringing life to otherwise routine products!

"I love the creativity that comes with my job! There are no limits to what you can create when you have the ability to write computer software."

Qualification Needed

Bachelor's Degree in Computer Science

What could you create using programming?
