

CAREER CAPERS

Anand

Acoustic Engineer

I design hearing protector headphones which protect human ears from loud noise. I spend time listening to sounds and carrying out sound measurements.

I also work with the microphones and loudspeakers in a headphone to make the sound clear and audible. Listening skills and understanding the physics of sound are important.

Qualification Needed

Master's Degree in Acoustics

Why do you hear an echo when you speak or sing in a church or empty room but not when you are outdoors?

"I'm really interested in sound and music, so spending time at work listening to speech, acoustic and environmental sounds is so much fun! Designing and tuning loudspeakers and microphones also gives me immense satisfaction."
