

CAREER CAPERS

Lizz

Analytical Chemist

I work in an occupational hygiene laboratory, analysing samples of air taken in my company's manufacturing sites.

I use a range of techniques and instrumentation to test these samples for substances which could impact the health of production workers. This work is vital to protect my company's employees.

Qualification Needed

Bachelor's Degree in Chemistry or related subject

If the air quality in factories was never tested, what do you think the consequences might be for the workers and the company?

"I work as part of a small friendly team in the lab, and also connect and interact with colleagues in manufacturing facilities all around Europe."
