

CAREER CAPERS

Maja

Senior Chemist

I work in a laboratory, analysing materials to gather information to answer questions about them, such as:

- What is this material?
- How does it behave chemically?
- Which raw materials does it contain?
- Has it been altered in some way?
- Has it been manufactured according to the correct specification?

Qualification Needed

Master's degree or PhD in Chemistry or Materials Science

By analysing materials using chemical techniques, what other questions do you think we could answer?

"My job is like a constant riddle that I am trying to solve! I like helping my colleagues to find the scientific information they need."
