Marion

New Product Introduction Project Manager

Accelerating research and development to bring new products into the world to support the drive to 'net zero emissions' is a major priority.

My role involves coordinating test work and material development to help customers tackle battery safety for electric vehicles for the future.

"Creating solutions for electric vehicle batteries involves testing materials, to monitor their reactions when subjected to extreme temperatures, flames, and pressures. As a result, I really do get to blow things up, under controlled conditions of course!"

**Qualification
Needed**

Technical
Degree

What are the risks associated with accelerating the creation of new products to help protect the environment and tackle the long-term sustainability issues we face?

Years of Experience
