

# Struggling to find a solution with the current challenges of chlorine shortages?

## 3M™ C. diff Solution Tablets are the solution for you!

Disinfectant in tablet form that can be used for  
pool super chlorination.

No  
premixing\*

# A disinfectant with multiple uses!

When it comes to the cleanliness and disinfection of your pools, you can't take chances. 3M™ C. diff Solution Tablets offer customers a way to maintain their pools while using a versatile EPA registered tablet technology.

- ▶ The 3M™ C. diff Solution Tablet is made from NaDCC (Sodium Dichloroisocyanurate) chemistry.
- ▶ NaDCC is a simple form of pool shock chemistry.
- ▶ NaDCC does not require premixing whereas other chemistries may.
- ▶ pH of 5.5 to 6.5 which is close to neutral (pH of 7).

- ▶ Tablet form is convenient and cost effective.
- ▶ 5-year tablet shelf life in sealed packets; 3-year tablet shelf life in loose containers.
- ▶ Dissolves fast and completely.
- ▶ Easy to use, with a mild chlorine smell.

## Direction and Guidance (per product label)

Pools for superchlorination: The pool water should be superchlorinated or shocked every seven days or whenever the combined chlorine level is above 0.5 ppm (mg/L). Combined chlorine is the difference between total and free chlorine, as measured by a suitable test kit. Add a sufficient amount of an appropriate shock product, such as this product directly to the circulating water as outlined below to raise the available chlorine level to 5–6 ppm (mg/L), based on test kit readings. If the combined chlorine reading is not below 0.5 ppm (mg/L), repeat the shock treatment described above. The addition of 50 tablets (to be used only for 13.1 g tablet) per 10,000 gallons of water will provide approximately 5 ppm (mg/L) of available chlorine. If the combined chlorine reading is not below 0.5 ppm (mg/L) and the water has not been restored to its normal clarity, repeat the shock treatment described above. Reentry into treated swimming pools is prohibited above levels of 4 ppm chlorine.
