

Total Cost of SCBA Ownership

When considering a SCBA purchase, one of the most important factors is the total cost of ownership of the product.

What are the considerations when determining the total cost of ownership of your SCBA?

01

Comprehensive Warranty

When you purchase a 3M™ Scott™ Air-Pak™ X3 Pro SCBA, certified to the NFPA 1981, 2018 Edition standard, you will receive a bumper-to-bumper warranty for as long as you own the product at no additional cost.

- ✓ Backframe and Harness
- ✓ Pneumatics
- ✓ Electronics
- ✓ Facepiece
- ✓ Cylinder

02

No Overhaul Required

3M™ Scott™ Fire & Safety does not require forced parts replacement or mandatory overhaul on 3M™ Scott™ Air-Pak™ SCBA. Our holistic design process delivers robust, comprehensive features that allow for cost-effective repairs while avoiding the replacement of major components.

03

Top-Down Convertibility

Many of our products allow you to use a single facepiece, with a single fit test for most NFPA, CBRN, and NIOSH respiratory applications. This total-solution approach helps reduce fit testing, training and inventory requirements.

04

Extensive Technician Network

3M™ Scott™ Fire & Safety has an extensive service center network, ranging from authorized distributors to in-house repair centers. We provide comprehensive hands-on training to help ensure that our technicians have the right skills and knowledge at the right time. Year after year, we demonstrate this commitment through significant investments in service training programs at no cost to our in-house repair centers.

05

Comprehensive Training Programs

3M™ Scott™ Fire & Safety offers comprehensive training programs to fit the needs of our customers. Our SCBA Certified Technician I program enables end-users to make basic repairs to the facepiece, backframe and harness, cylinder valve, and specific mask-mounted regulator parts in order to return equipment to service sooner and reduce labor cost.

06

Opportunity for Upgrades

3M™ Scott™ Fire & Safety offers a path to extend the life of many products, when feasible, that includes upgrading our 3M™ Scott™ Air-Pak™ X3 Pro SCBA to current NFPA standards and enabling backwards compatibility of facepieces to previous NFPA standards.

Forged for the Long Run
