Achieve an A+ clean at your school efficiently and effectively.

Facility teams know the stakes have never been higher to keep schools clean for students and staff. With increased cleaning and disinfection efforts, facility management teams must find ways to do more with less and make the products and tools they use work harder.

From the time the first bell rings to the time the last bus leaves, a lot goes on in the halls, classrooms and common spaces of your school. Choosing the right products to care for these spaces that save time and effort while maximizing your budget is key.

Accuracy is attainable.

The first and most important step in any facility management plan is to diligently continue with your daily routine of cleaning, sanitizing and disinfecting. It is also helpful to periodically audit your existing cleaning plan to ensure you have the right products, tools and processes in place.

One process that can't be overlooked when looking to maximize your budget and streamline your processes is proper chemical management. Chemical management is key to accurate and effective cleaning. By using the right chemical management system, facility managers can save money on chemicals by ensuring they are accurately diluted every time. Additionally, taking the manual guesswork out of mixing chemicals allows facility teams to focus their time and attention elsewhere.

The **3M™ Flow Control System** is an innovative dispensing unit that utilizes flow control technology to deliver 55% more accurate chemical dilutions, on average.¹ More accurate chemical dilutions means less chemical waste which can contribute to cost savings for your facility. Additionally, through unique flow control technology, the 3M™ Flow Control Wall Mount System delivers accurate cleaning solutions directly into your containers, minimizing worker interaction with chemicals.

Facility managers know that inaccurate dilution may lead to too much of a chemical in a solution, which could damage surfaces. Conversely, using too little product may not allow for the appropriate chemical ratio needed for proper disinfection per the product label. With a chemical management system, however, you no longer need to mix chemicals yourself and risk improper dilution.

3M™ Flow Control Wall Mount System

Floor care made easy.

The floor is one of the largest surfaces in your school and it must be taken care of with a planned maintenance program. The life of flooring will be compromised if it is not properly taken care of with products and processes specifically designed for your flooring type. However, facility management teams are busier than ever, to-do lists are long, and budgets are tight. That's why 3M designs floor care systems to fit seamlessly into ongoing maintenance routines to help you achieve beautiful results while reducing costs over time.

For resilient floors, switching to the **3M™ Advanced Floor Care System** can help facility teams reduce labor and product costs associated with routine floor maintenance. The system is made up of three Green Seal™ Certified products including the 3M™ Clean & Shine Daily Floor Enhancer, Scotch-Brite™ Clean & Shine Pads, and the Scotchgard™ Protect & Shine Floor Protector, allowing users to achieve a high-gloss floor appearance with less labor and fewer chemicals over time.

3M™ Clean & Shine Daily Floor Enhancer — This two-in-one product may help to reduce your labor and chemical usage while meeting the standards you need for daily floor cleaning — and improving your floors' qualities over time.

Scotch-Brite™ Clean & Shine Pads — Utilizing abrasive technology, the Scotch-Brite™ Clean & Shine Pad removes black marks 3X faster than a traditional cleaning pad. It also cleans and shines in the same step and reduces or eliminates the need to burnish, saving you time and money.

Scotchgard™ Protect & Shine Floor Protector — When compared to leading acrylic floor finishes, the Scotchgard™ Protect & Shine Floor Protector reduces maintenance by requiring less chemical stripping and less frequent or no burnishing. The floor coating it creates also resists scratches and marks and can even protect against degradation caused by hand sanitizer.

When managing the cleanliness of a facility as critical as a school, sacrificing efficiency or effectiveness isn't an option. It is, however, possible for facility management teams to do more with less by leveraging products and tools designed with their busy schedules in mind. With 3M, your school has access to solutions that can help save money, aid in productivity and help decrease product waste.
