

# FPEI (Course #6411)

## Fall Protection - Equipment Inspector

### Ratio

12 students to 1 instructor

### Duration

0.5 day

### Overview

Every day, workers around the globe rely upon fall protection equipment to help protect them when performing duties at height. Although fall protection equipment is built strong for the environments in which it will be used, it is still susceptible to the rigors of the workplace. Both end-user and periodic inspections are critical to help ensure it is ready to perform if and when needed.

This half-day course educates students on the principles of equipment care and the procedures for inspecting commonly used items excluding specialized permanent systems. Participants will learn course content through a combination of direct instruction, workbook exercises, and a practical 'hands-on' inspection workshop.

### Prerequisites

Those attending must have successfully completed a Fall Protection Competent Person course.

### Who Should Attend

Course participants are those who may be involved with a managed fall protection program, including the tool crib operator, inventory manager, safety personnel, and worker.

### Course Objectives & Content

- Oversight groups
- Equipment tracking
- Maintenance procedures
- Storage principles
- Inspection types and schedules
- Documentation and record keeping
- Component failure criteria
- Inspection procedures
- Inspection workshop

### Certification

The successful delegate will receive a certificate valid for 2 years.

### Standards

Upon request, training conforms to the provisions established by applicable ANSI standards.
