

FPCP (Course #6424)

Fall Protection - Competent Person

Ratio

12 students to 1 instructor

Duration

2 days

Overview

Protecting workers at-height is a challenging task and is dependent on particular job site situations and individual worker duties. There are many fall protection solutions available to workers, each having its own specific requirements. Understanding each option and proper implementation requires oversight by an experienced individual with a higher-level of knowledge and safety training.

This two-day course educates students on the various components of a worksite fall protection program and will also help develop the skills required of a Competent Person. Participants will learn course content through a combination of direct classroom instruction and multiple workshops.

Prerequisites

Medically fit with a head for heights. Recognised relevant working at height training.

Who Should Attend

Course participants are those who may be involved with a managed fall protection program including the employer, supervisor, safety personnel, workers, and rescuers.

Course Objectives & Content

- Fall hazard identification
- Fundamentals of working at height
- Fall protection oversight
- Worksite programs
- Passive systems
- Administrative controls
- Fall protection planning
- Fall arrest system components
- Positioning systems
- Equipment care
- Rescue overview
- System analysis

Certification

The successful delegate will receive a certificate valid for 2 years.

Standards

Upon request, training conforms to the provisions established by applicable ANSI standards.
