Smiles of Success

See how these
patients' smiles
were transformed
by composite
treatment.

Yours could be next!

It's easier than ever to get the smile you've always wanted.

Your dentist can perform a composite restoration to treat a variety of esthetic concerns on both upper and lower teeth, including adding length, creating symmetry, restoring worn teeth, and more.

You can get a beautiful new smile **in as little as two appointments!**

1st appointment:

Your dentist takes a digital impression of your smile.

2nd appointment:

Your dentist completes the composite treatment, and you leave with a new smile.

Your dentist can use dental composites with a custom matrix to solve issues like:

- Gaps between teeth
- Undersized teeth
- Asymmetrical or Misaligned teeth
- Chipped or worn teeth
- Discoloured teeth

Explore the possibilities!

What can you look forward to with composite treatment?

Natural-looking results

Composites are tooth-coloured to produce beautiful results that blend into your smile.

Fast

Your dentist can use a custom matrix to deliver incredible results in as little as two appointments!

Less Invasive

Composite treatment generally preserves more tooth structure.

Durable

Composites are strong, proven materials that can last for many years with proper hygiene habits.

Worn Teeth

Frequently Asked Questions

- 1 What does the procedure require?**
Treatment typically includes two appointments. At your first appointment the dentist will take photos and a digital impression of your teeth. At the next appointment, your doctor will perform the composite restoration and you will walk out with your new smile.
- 2 How long will the results last?**
Composites are a durable and clinically proven restorative material. Your dentist can advise you on how to maximize the longevity – including proper hygiene habits.
- 3 How do I care for the restoration?**
Your beautiful smile may be new, but the way you care for it is the same regular brushing and flossing. The great thing about composite restorations is they can be repaired quickly and easily if damaged.
