

These tapes are produced via a solvent-free adhesive coating process.

Your annual purchase of 100,000 sqm of 3M™ Double Coated Tissue Tapes results in eliminating the use of approximately 7 tons of solvent, rather than the purchase of 3M tapes made via a typical solvent-based adhesive coating process. Benefits include no emission of solvents, no need for solvent recovery, which is an energy-intensive process, and less energy use compared to solvent-based coating technology.
