Cool where it counts

3M™ Cooling Film

keeps roofs up to

5.5 – 16.6 °C

cooler,

reducing how much
heat enters the vehicle

3M™ Cooling Film

When you apply 3M™ Cooling Film to the roof of a lorry trailer, it reduces heat buildup at the source. This highly reflective performance film is engineered to help cool without external power.

It reflects over 85% of the sun's thermal energy and maintains high thermal emittance that lasts. This cutting-edge film helps reduce heat exposure for temperature-sensitive cargo on routes especially exposed to the sun. By helping keep the trailer cooler, the film reduces interior heat load and can reduce refrigeration demand.

Minimal maintenance is needed to sustain performance because the durable coating resists dirt, chemicals and wear in normal operating conditions.

Releases
heat
naturally

Reflects over
85%
of solar radiation

Key benefits

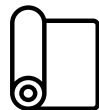

Reduces interior heat load, which may reduce the need for additional insulation.

Backed by proven 3M product performance and manufacturing expertise.

Helps save fuel.

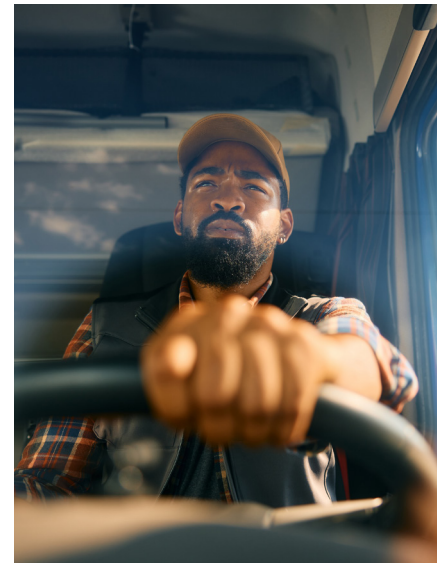

Designed to integrate into existing workflows, using established graphics installation practices.

Quick installation helps keep refrigerated units in service with minimal downtime.

Backed by a 5-year warranty.
