A Generation Ahead.
A New Dimension in Strength.

Protemp 3
Garant

The New Generation of Temporary Crown and Bridge Materials
Protemp™ 3 Garant™ Temporary Material

The temporary crown and bridge material with extraordinary strength

The unique formulation of Protemp 3 Garant temporary material ensures a fracture rate markedly below that achieved by most previous temporary crown and bridge materials. A “shock absorbing effect” intrinsic to the material cushions short-term peak forces, thus helping to prevent material fracture or chipping of the temporary restoration margins. The superior strength of Protemp 3 Garant means fewer failed temporary restorations and fewer unscheduled surgery visits, which cost you time and money.

Protemp 3 Garant temporary material keeps its shape under pressure

The high mechanical strength of Protemp 3 Garant temporary material keeps prepared teeth in position. Occlusal contacts and proximal support are preserved. In contrast to Protemp 3 Garant, the inadequate mechanical strength of typical PMMA products permits drifting of the abutments and transmits stress to the periodontium and gingivae.
Protemp™ 3 Garant™
A Benchmark.

Indications:
- Crowns
- Bridges
- Inlays and onlays
- Veneers
- Crown lining

Smooth surface means better aesthetics

Temporary restorations made from Protemp 3 Garant Temporary Material have a smoother surface even before finishing, which means easier polishing, aesthetic appearance and protection against staining.

RelyX™ Temp NE
Powerful bond, yet easy to remove

An ideal solution for temporary restorations

RelyX Temp NE is a eugenol-free temporary luting cement for provisional attachment of both temporary and permanent crowns and bridges, inlays and onlays.

Optimal fit

RelyX Temp NE from 3M ESPE ensures optimal fit due to the extremely low film thickness of 3 µm.

The cement is also available in the eugenol-containing formulation of RelyX Temp E.
