3M™ ChartView™ Software

- **Robust tool for real-time electronic document management**
- **Direct, easy, and simultaneous access to patient records**
- **Onsite and remote access to scanned and transcribed documents at any time**
- **Integrate with EHRs for centralized document access and viewing**

The 3M advantage

3M ChartView is an innovative and practical solution providing instant, secure access to patient records from any workstation on a hospital network or virtually anywhere else. Appropriate care team members can have simultaneous access to the patient record.

Handling patient data that is dictated, scanned, or collected from third-party systems, 3M ChartView lets you migrate from paper to electronic documentation—or bridge both in a hybrid environment—giving your care providers real-time access to patient documentation anywhere at any time.

The challenge

Legacy systems often do not communicate with each other, so workflow is disjointed and navigating across systems to find information is difficult. Errors occurring in disparate electronic systems and on paper are difficult to detect and correct, and HIPAA compliance must be maintained without centralized electronic safeguards for security and privacy.

Many organizations prefer not to jump from established paper-based processes and legacy systems into newer technology, but instead migrate gradually into the new electronic environment, minimizing disruption to daily operations. These organizations also want a solution that accommodates a variety of departments and workflows, each with its own requirements and procedures.

The solution

The **3M ChartView Software** is a **single-source electronic document viewing tool** for both onsite and offsite access to scanned document images, transcribed reports, and imported data in a patient's record. It provides direct, easy, simultaneous access in real time, the features physicians want, and the tools HIM managers need to manage patient care documentation.

3M ChartView's real-time access and easy navigation from anywhere can help improve patient care by making information quickly available to authorized providers and staff. Physicians can review transcribed documents and scanned images, respond to queries, and finalize information whenever and wherever it's most convenient, saving time and reducing deficiency rates.

For HIM professionals, 3M ChartView's document access improves back-office productivity and quality by making chart management, coding and abstracting more efficient and accurate. Timely, complete and correct coding means faster revenue cycle turnaround. An organization can reduce and eventually eliminate paper document printing and handling over time, resulting in significant savings. 3M ChartView can even positively impact recruiting and retention by enabling such functions as remote coding.

3M™ Chartview™ Software

Facilities that use 3M ChartView can benefit from increased HIPAA privacy and security monitoring by restricting the view of certain document types as needed and auditing who views each document. It integrates seamlessly with other 3M applications and third-party HIT systems for a comprehensive approach to electronic document management.

Features

- Displays clinical results and patient information in various formats, including TIFF, RTF, HTML, digital audio dictation files, ERM/COLD-fed reports and more
- Customizes document views for different end-users, physicians or departments lists
- Filters patient information for a single visit or multiple patient encounters
- Creates online queries and lists
- Designates which users can print official medical record copies
- Imports documents such as laboratory results, radiology reports and third-party imaging system documents for online viewing (when used the 3M™ ChartLinc Software)
- Enables review and signing of documents from anywhere (when used with the 3M™ Electronic Signature Authentication Software)

3M™ ViewLinc Software

Optional 3M™ ViewLinc Software is a browser-based application that can be launched from within an EHR to display documents stored in the 3M™ RAAS DL™ Software database. ViewLinc includes a 3M interface that sends document pointers to the EHR.

An integrated document management solution

3M ChartView can be integrated with:

- **3M™ ChartScan™ Software**—Intelligent, patented scanning application that automates forms, production and indexing.
- **3M™ RAAS DL™**—Supplies long-term storage for electronic documents with easy retrieval.
- **3M™ ChartQ Software**—Provides workflow management for online chart completion and coding.
- **3M™ Electronic Signature Authentication Software**—Enables physicians to review, annotate, and sign documents anytime and anywhere.
- **3M™ ChartLinc Software**—Provides patient registration data and clinical results via HL7 to 3M ChartView.
- **3M™ ChartScript™ Software**—Facilitates transcription of dictation and editing of speech-recognized documents, both onsite and offsite.
- **3M™ ChartScriptMD™ Software**—Employs templates and front-end speech recognition for physician document creation and signature in one session.

3M ChartView is also a useful reference tool when used with:

- **3M™ ChartFact™ Software**—Analyzes deficiencies and helps reduce chart completion time.
- **3M™ ChartRelease™ Software**—Manages release of information, reducing chart retrieval time.
- **3M™ 360 Encompass™ System or 3M™ Coding and Reimbursement System (CRS)**—Scanned and transcribed documents are available for coding and documentation improvement processes.
- **3M™ ClinTrac™ Product Suite**—Scanned documents and transcribed documents are available for coding and case management.
