

3M™ ClinTrac™ Clinical Abstracting Software

- Improve revenue cycle workflow, efficiency and accuracy to help reduce billing cycle times
- Capture and access data with abstracting, data monitoring and reporting tools
- Enhance clinical quality improvement and patient safety initiatives and reduce claims denials
- Improve productivity and cost savings using integrated coding, abstracting and chart management software

The 3M clinical data advantage

3M ClinTrac Clinical Abstracting (CA) Software is a secure, robust abstracting solution for your facility or enterprise. It helps maximize your coding and data entry workflow, reduce billing delays and provide comprehensive reporting capabilities. 3M ClinTrac CA integrates seamlessly with 3M™ Coding and Reimbursement System, 3M™ 360 Encompass™ System, electronic health record (EHR) systems, and other 3M and third-party applications. The result? Better outcomes for your patients, more accurate coding and reimbursement, and improved productivity across the board.

Challenge: Capture the value in your hospital data

The shift to value-based payment dictates that healthcare organizations achieve maximum value from their clinical, financial and patient data. Decision makers must fine-tune their data management strategy and employ technology solutions that support improvements in quality initiatives, while maintaining or lowering the cost of care delivery.

Evolving healthcare regulations and payment systems call for integrated tools that can help identify and monitor improvement opportunities across the healthcare continuum. Steps taken to support better patient outcomes must work hand-in-hand with greater cost efficiency.

Solution: Collect, code, customize

3M ClinTrac Clinical Abstracting (CA) Software is designed to enhance clinical data retrieval and management. It automates and streamlines how data is collected, aggregated and reported for a wide variety of key data sources, including patient medical records and quality indicator data. Users can tailor fields and screens to improve efficiency in accessing, transferring and viewing data elements to help reduce billing delays and minimize unbilled claims. By providing in-depth patient quality data, the 3M software supports daily, weekly or monthly reporting requirements. User-defined fields can easily be created for special studies or service line analysis.

More than a powerful abstractor, 3M ClinTrac CA's real-time, HL7, ASCII-fixed or proprietary formats use a batch or automated data transfer protocol and integrate with 3M Coding and Reimbursement System, ancillary department applications and EHRs. This allows for the import and export of data across a single facility or enterprise network. 3M ClinTrac CA offers security levels in both data entry and reporting functions to control user access.

Take control of your abstracting process

3M ClinTrac CA provides a versatile, streamlined abstracting solution that supports key healthcare provider processes, including coding, reimbursement, quality improvement, patient safety, billing audits, clinical research and other vital analytics.

3M™ ClinTrac™ Clinical Abstracting Software

3M ClinTrac CA can help streamline such key functions as:

- **Data capture** using tailored screens to collect mortality, blood usage, newborn, delivery, medications and nursing unit data, including options to trigger specific events after a record closes
- **Data management** with automated recording of complications and co-morbidity (CC and MCC) data and drill-down ability to view records for each episode of care for the same patient
- **Reporting** through a large library of standard reports and unlimited ad hoc reports with the ability to report on quality indicators while maintaining compliance with privacy and payment rules
- **Scheduling/worklist creation** for coders, abstractors, revenue cycle managers, HIM directors and others
- **Billing accuracy** with customer-defined mandatory fields for finalizing and verifying all edits prior to dropping a bill
- **Security** with individual user ID, automatic inactivity log-off, and user-defined access levels and assignments

A comprehensive solution

In addition to 3M ClinTrac CA, the **3M™ ClinTrac™ Suite** also includes the **3M™ ClinTrac™ APC Pro Ambulatory Management Software** for ambulatory abstracting; the **3M™ ClinTrac™ Care Planning Manager Software** for integrated case management, utilization review and discharge planning; and the **3M™ ClinTrac™ Quality Manager Software** for collecting, analyzing and reporting on key quality indicator data.

These flexible applications can help care providers and quality managers improve accuracy, lower costs, and coordinate revenue management demands with patient care activities.

Seamless integration with 3M coding, grouping and more

To create a comprehensive system, you can combine the 3M ClinTrac Suite with the **3M™ Coding and Reimbursement System** or the **3M™ 360 Encompass™ System**, the **3M™ Audit Expert System** and a wide variety of **3M grouping methodologies**. The 3M coding system computes the correct codes, appropriate grouping and reimbursement, and the 3M ClinTrac software stores the results for retrospective analysis and reporting. The integration provides automatic grouping and capture of results with limited coder involvement.

Including the **3M™ Potentially Preventable Readmission (PPR)** and **3M™ Potentially Preventable Complications (PPC) Grouping Software** is optional, but highly recommended for bolstering compliance and patient safety initiatives.

You can also integrate 3M ClinTrac CA with the:

- **3M™ Clinical Documentation Improvement (CDI) System**—to conduct documentation review and clinical documentation improvement
- **3M™ ChartView™ Software and 3M™ ChartScript™ Software**—to facilitate the review of patient-level electronic documentation and transcription reports
