

3M™ Clinical Documentation Improvement System

- Promotes accurate and complete clinical documentation by providing guidelines and edits during concurrent chart review
- Guides your team through complex documentation requirements
- Identifies potential compliance risks, missed concepts, hospital-acquired conditions (HACs), potentially preventable complications (PPCs) and specificity at the working DRG level

The 3M advantage

3M delivers expert consulting and advanced software to help hospitals improve their documentation processes. The 3M CDI System can help your organization achieve:

- Accurate, complete documentation
- Accurate profiling reports for your organization
- Increased specificity and accuracy for complete reimbursement

Clinical documentation improvement (CDI) professionals receive credit for the number of reviews and physician clarifications requested each day based on the patient treatment.

Keep pace with clinical documentation requirements

Documentation requirements continue to grow more complex. Requirements like present on admission (POA) indicators, changes in reimbursement formulas and new rules and regulations covering both adult and pediatric populations make it difficult to stay current and sustain coding and documentation accuracy over time.

The 3M Clinical Documentation Improvement (CDI) System provides clinical documentation guidelines interactively in an automated, concurrent documentation review setting. Our 3M CDI System is like having an expert consultant at your side 24/7. It can help your CDI process by:

- Identifying needed adjustments in documentation practices
- Leveraging clinical expertise of the reviewers and coders with prompts and documentation edits
- Securing complete and accurate quality documentation

Expert severity and risk adjustment

Your facility benefits from 3M's industry-recognized expertise in severity and risk adjustment. The 3M™ APR DRG Classification System is used to analyze the conditions and procedures submitted by the CDI professional, along with patient attributes such as gender, age, risk factors, conditions and symptoms. The system recommends additional clinical conditions that can impact the MS-DRG, severity of illness (SOI), and risk of mortality (ROM). This allows hospitals to achieve precise documentation within coding guidelines.

Enhance your CDI workflow

Prior to discharge is the best opportunity to collect pertinent documentation. The 3M CDI System supports a concurrent review process with tools to help your CDI team effectively interact with physicians.

The system's dynamic worklists also help manage workflow by identifying charts that need review.

3M™ Clinical Documentation Improvement System

Powerful reporting

The 3M CDI System provides actionable data to the management team to aid in hospital and administrative decisions. There are 33 report categories with more than 100 reporting areas, including:

- MCC/CC capture rate
- Executive summary
- Case mix index
- Physician communication summary (see sample below)
- Financial impact of queries (e.g., trending of query topics, SOI and ROM outcomes for reviewed cases)
- Automatic worklist generation
- Observation and HAC reports

- Increases staff understanding of compliance issues, regulatory standards and guidelines to help reduce compliance risk
- Improves workflow and communication by automating the concurrent review process
- Provides quarterly updates of guidelines to assist facilities in adapting to changes within the Centers for Medicare & Medicaid Services (CMS) regulations
- Serves as continuing education and a desktop reference source for CDI professionals and coding staff to enhance their knowledge of documentation and coding rules

Key benefits

- Reflects your patient population's SOI and ROM
- Improves accuracy of hospital and physician profiling outcomes
- Makes ICD-10 documentation concepts available to help achieve greater specificity in the documentation
- Offers over 50 clinical queries on documentation issues to assist in decreasing the number of chart deficiencies in adult and pediatric populations

Physician communication summary by financial class (sample system data)
