IJ680CR-10 with Comply™ Adhesive

Product Description
• For Solvent, UV and Latex Inkjet printing
• 7-mil, flexible, enclosed lens, retroreflective film

Product Features
• Available in white only
• Similar daytime and nighttime appearance that retains most of its reflectivity when wet
• Excellent angularity
• Pressure-activated adhesive for easy sliding and tacking
• Designed for excellent cutting and weeding with computer sign cutting equipment
• Air release channels for fast, easy, bubble-free graphic installation
• Unprocessed film resists fuel vapors or occasional spills
• Removable with heat and/or chemicals
• Expected Performance Life of 9 years (unwarranted period for unprinted film with no graphic protection, applied to a flat, vertical, outdoor surface)

Recommended Types of Graphics and End Uses
• Commercial straight trucks, semi-trucks and semi-trailers
• Buses, vans, passenger vehicles, delivery and pickup trucks, and enclosed trailers
• Rail and lead cars of trains
• Non-regulated indoor and outdoor signage, emblems, and striping
• Indoor and outdoor graphics and signs
• Small-format original equipment manufacturer’s (OEM) decorative and identification graphics, cautionary and safety labeling

When constructed and used as described in this Bulletin, these types of graphics and end uses may be warranted by the 3M™ MCS™ Warranty or the 3M Performance Guarantee. Please read the entire Bulletin for details.

IMPORTANT NOTE
This film is not recommended for use on stainless steel or chrome substrates. Contact your sales representative for information about products recommended for use with these substrates.

Recommended Compatible Products
See 3M.com/graphicswarranties for a complete list of compatible products that are approved by 3M for use with the base film covered in this Bulletin and used for the creation of a graphic that may be eligible for the 3M™ MCS™ Warranty or 3M Performance Guarantee.

OEM Inkjet Inks and Printers for the 3M Performance Guarantee
See the 3M Performance Guarantee Matrix for a complete list of compatible OEM Inkjet Inks and Printers that are approved by 3M for use with the base film covered in the Bulletin and used for the creation of a graphic that may be eligible for the 3M Performance Guarantee.
3M™ Scotchlite™ Removable Reflective Graphic Film

Graphic Protection
- 3M™ Scotchcal™ Gloss Overlaminate 8518
- 3M™ Scotchcal™ Luster Overlaminate 8519
- 3M™ Screen Print Gloss Clear 1920DR
- 3M™ Screen Print UV Gloss Clear 9740i
- 3M™ Scotchcal™ Gloss Overlaminate 8528
- 3M™ Envision™ Gloss Wrap Overlaminate 8548G
- 3M™ Envision™ Luster Wrap Overlaminate 8549L
- 3M™ Gloss Wrap Overlaminate 8418G

Other Products
- 3M™ Edge Sealer 3950

Application Tapes
See 3M Instruction Bulletin AT-1 to determine which application tape is recommended for the film or finished graphic.

Certificate of 3M™ MCS™ Warranty
Graphic manufacturers who produce digitally printed graphics made with all 3M Graphics Products, including 3M Ink purchased through a qualified 3M Distributor or 3M Printing Partner, may register to be recognized with a Certificate of 3M™ MCS™ Warranty. Only graphic manufacturers having a current Certificate of 3M™ MCS™ Warranty are eligible to extend this warranty to their customers.

Note: For non-digitally printed Finished Graphics, check your eligibility for the 3M™ MCS™ Warranty by viewing the Warranty Period found within the Product Bulletin or using the warranty selector at www.3mgraphics.com/warranties.

Characteristics
These are typical values for unprocessed product; processing may change the values.

<tr>
<td>Film Color</td>
<td>Color: White&lt;br&gt;Typical Coefficient of Retroreflection: 100</td>
</tr>
<tr>
<td>Retroreflection Definition</td>
<td>The typical coefficient of retroreflection defined is measured at a -4° entrance angle and a 0.2° observation angle. It is expressed in candlepower per foot-candle per square foot (candela/lux/square meter) per ASTM E810. The entrance angle is formed by a light beam striking the surface at a point and a line that is perpendicular to the surface at the same point. An observation angle is formed by the light beam striking the reflective surface and returning to the observer. From 800 feet (249 meters), a motorist normally views a graphic at a 0.2° angle.</td>

Warranty Information

**Warranty Coverage Overview**

The warranty coverage for eligible graphics is based on the user both reading and following all applicable and current 3M Graphics Product and Instruction Bulletins. The warranty period for eligible graphics is as stated in the 3M Graphics Warranties Matrices at the time that the film was purchased. Information found at 3MGraphics.com/warranties, at the time that the film was purchased. The warranty period may be reduced and stipulations may apply for certain constructions and applications, as covered in this Bulletin. The warranties set forth in this Bulletin are made in lieu of all other express or implied warranties, including any implied warranty of merchantability, fitness for a particular purpose, or arising out of a course of dealing, custom, or usage of trade.

**3M Basic Product Warranty**

3M Graphics Products are warranted to be free of defects in materials and manufacture at the time of shipment and to meet the specifications stated in its applicable 3M Graphics Product Bulletin and as further set forth in the 3M Graphics Warranties Bulletin.

**Limited Remedy**

The limited remedy applicable to each warranty is addressed in the 3M Graphics Warranties Bulletin found at 3MGraphics.com/warranties.

**Limitation of Liability**

Except to the extent prohibited by law, 3M SHALL NOT UNDER ANY CIRCUMSTANCES BE LIABLE TO PURCHASER OR USER FOR ANY DIRECT (EXCEPT FOR THE LIMITED REMEDY PROVIDED HEREIN), INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, LABOR, NON-3M MATERIAL CHARGES, LOSS OF PROFITS, REVENUE, BUSINESS, OPPORTUNITY, OR GOODWILL) RESULTING FROM OR IN ANY WAY RELATED TO 3M’S GRAPHICS PRODUCTS, SERVICES, OR THIS BULLETIN. This limitation of liability applies regardless of the legal or equitable theory under which such losses or damages are sought.

**Warranty Period Matrices - Inkjet**

See the 3M Graphics Warranties Matrices at 3MGraphics.com/warranties, for vertical warranty period information specific to your film.
Reduced Warranty Period for Other Graphic Exposures

For other graphic exposures, determine the applicable reduced warranty period by multiplying the standard warranty period (in years) for your graphic construction (as shown in the applicable warranty period tables) by the percentage shown for the intended graphic exposure. See “Exposure Types” on page 3 of the 3M Graphics Warranties Bulletin for graphic exposure definitions.

Table B. Reduced Warranty Period for Other Graphic Exposures

</tbody>
</table>

Factors that Affect Graphic Performance Life

- The combinations of graphics materials used
- Complete ink drying or curing
- Selection, condition and preparation of the substrate
- Surface texture
- Application methods
- Angle and direction of sun exposure
- Environmental conditions
- Cleaning or maintenance methods

Graphics Manufacturing

⚠️ CAUTION
Before using any equipment, always read the manufacturer’s instructions for safe operation.

Inkjet Printing

Always read and follow the ink manufacturer’s written instructions on usage.

Total Ink Coverage

The maximum recommended total ink coverage for this film is 250% for all solvent, latex and UV inks. Do not exceed the recommended total ink coverage for the ink series used on this product. Having too high a total physical ink amount on the product results in media characteristic changes, incomplete drying, overlaminate lifting, and/or poor graphic performance. For additional details about total ink coverage, refer to the 3M Product and Instruction Bulletin for 3M inks or the 3M Performance Guarantee Matrix for OEM inks.

⚠️ IMPORTANT NOTE
Be sure to check the consistency of color on reflective film as it may appear different in daytime and nighttime lighting.

Completely Dry Graphics

⚠️ IMPORTANT NOTE
Incomplete drying or curing can result in graphic failure including curling, increased shrinkage and adhesion failure, which are not covered under any 3M Graphic Warranty.

See the ink’s 3M Product and Instruction Bulletin for more details.
Cutting
See 3M Instruction Bulletin 4.1 for Sheeting, Scoring and Film Cutting details.

Graphic Protection
Graphic protection may improve the appearance, performance and durability of the graphic. Click on the graphic protection options listed in Product Bulletin or see the 3M Graphics Market Product Catalog for more information.

IMPORTANT NOTE
During installation, scratches may occur on films without graphic protection.

Application Tapes
There are two types of application tapes. See 3M Instruction Bulletin AT-1 to determine what application tape is recommended for the film or finished graphic.

P remasking Tape
Increases stiffness during application while preventing stretching and damage. Use when little or no liner is exposed. See 3M Instruction Bulletin 4.3 for complete details.

Prespacing Tape
Holds cut and weeded letters or graphics in place during application and after removing the film liner, while preventing stretching and damage. Use when large amounts of liner are exposed. See 3M Instruction Bulletin 4.3 for complete details.

IMPORTANT NOTE
Do not attempt to exchange the liner. This will compromise the slideability of the film, and could negatively impact adhesion or appearance of the applied graphic, which is not covered by any 3M warranty.

Application and Installation
In addition to other 3M Bulletins specified in this document, the following Bulletins provide details that you may need to successfully apply a graphic.

- 3M Instruction Bulletin 5.36 Application Techniques for Automobiles, Vans and Buses. Complete the 3M Pre-Installation Inspection Record found in this Instruction Bulletin prior to manufacturing or applying a graphic to an automobile, van, or bus.
- 3M Instruction Bulletin 5.4 Application, Fleet Trucks.
- 3M Instruction Bulletin 5.5 Application, General Procedures for Interior and Exterior Dry Application
- 3M Instruction Bulletin 5.1

IMPORTANT NOTE
This film is not recommended on low surface energy (LSE) substrates such as some plastics, powder-coated paint, etc. The user must assume responsibility for testing and approving these substrates.

IMPORTANT NOTE
This film can be applied over other recommended 3M graphic systems. Graphics printed with clear 1920DR must be weathered for at least one year before applying this film over it. See 3M Instruction Bulletin 5.1 for details.

IMPORTANT NOTE
Some substrates such as under-cured polyurethane paint, fiberglass and some paint systems may continue to outgas for some time. Two-part polyurethane paints and screen print clears may stop curing when the air and surface temperature are lower than 75°F (24°C). Make sure the substrate or paint is fully cured before applying the film or the applied film may bubble.

IMPORTANT NOTE
UV Inkjet inks may crack if too much heat is used during graphic application to complex curves, deep contours and around rivets. When using heat during application, make sure the film surface temperature does not exceed 212°F (100°C). For best results, always do a test application of a printed graphic to determine how much heat can be used without damaging the image.
IMPORTANT NOTE
3M recommends using a heat gun to post-heat the applied film for all vehicle graphics. After applying the film (and after making sure to remove application tape), all film edges and cut letters should be post-heated to a film surface temperature of 130 - 150°F (54 - 66°C) and then re-squeeged. This should ensure adequate adhesion and minimize the risk for edge lifting. Film applied in deep channels and recessed areas should be post-heated to a film surface temperature of 200 - 225°F (93 - 107°C) to reduce the risk for lifting in those areas. Make sure the film is adhered to the substrate before using the heat gun or you may shrink or burn through the unsecured film!

IMPORTANT NOTE
The retroreflectivity values for the unprinted film are similar regardless of which way the film is rotated (0° versus 90°). However, the printed image may have variability caused by the printer (crossweb banding, etc.), so it may help to keep track of the film orientation during installation.

IMPORTANT NOTE
Do not assume different run numbers will give a uniform nighttime appearance when placed side-by-side. When producing multipanel jobs, use film from the same roll (or at least the same run number). Apply adjacent panels with the film running in the same direction. If applying panels side-by-side, to overcome side-to-side variability within a roll, rotate every other panel by 180° in the RIP layout so the edges of adjacent panels meet from the same side of the roll. See Figure 1. Notice that the matching edges are always swung to meet each other. For example, the right side of panel 1 and the left side of panel 2 should come from the right side of the roll. (For more information, see section 4 of 3M Instruction Bulletin 4.1 Sheeting, Scoring and Film Cutting.)*

Figure 1. RIP Layout

Pressure-Activated Adhesive
The pressure-activated adhesive on this film offers:
- Smooth sliding into position on a substrate
- Fast finger tacking to check position

The slideability feature is lost:
- When firm pressure with a squeegee or other application tool is applied
- At application temperatures above 100°F (38°C), even if only light finger pressure was used for tacking
- If any part of the film is removed from the original liner and reapplied to the same or another liner
- Solvent from Inkjet ink has not completely dried or cured
3M™ Scotchlite™ Removable Reflective Graphic Film

Working with Air Release Channels

Air release channels are a characteristic of films with Comply™ adhesive that allow trapped air to exit through the edges of the graphic.

- The channels will be damaged and effective air removal affected if you remove and attempt to change liners or reapply the same liner.
- For the best results, always work from the center out to the edges of the graphic to allow trapped air to exit through the air release channels. If the channels are closed off by firm pressure and air is trapped, use an air release tool to aid in removing air bubbles. See 3M Instruction Bulletin 5.4 for details.

Video

Click here to see how 3M's Comply™ adhesive technology works.

Maintenance and Cleaning

Use a cleaner designed for high-quality painted surfaces. The cleaner must be wet, non-abrasive, without solvents and have a pH value between 3 and 11 (neither strongly acidic nor strongly alkaline). See 3M Instruction Bulletin 6.5 for details.

Removal

Removal requires heat and/or chemicals. 3M makes no claims as to the ease or speed of removal. This product may not remove similarly to other products in the same category. See 3M Instruction Bulletin 6.5 for details.

Shelf Life, Storage and Shipping

Shelf Life

The shelf life is never more than 3 years from the date of manufacture on the original box. If you process the film, the shelf life is changed to 1 year from the processing date, but not later than the 3 year maximum from the manufacturing date. If you do not process the film, apply it within 3 years.

Storage Conditions

- 40°F to 100°F (4°C to 38°C)
- Out of sunlight
- Clean, dry area
- Original container
- Bring the film to print room temperature before using

Shipping Finished Graphics

Film with prespaced graphics using 3M™ Prespacing Tape SCPS-55 applied: Flat only
All other constructions: Flat, or rolled printed side out on 6 inch (15 cm) or larger core. This helps prevent the application tape, if used, from popping off.
Health and Safety

⚠️ CAUTION
When handling any chemical products, read the manufacturers' container labels and the Material Safety Data Sheets (MSDS) for important health, safety and environmental information. To obtain MSDS sheets for 3M products go to 3M.com/MSDS. To receive by mail or in case of an emergency, call 1.800.364.3577 or 1.651.737.6501.

When using any equipment, always follow the manufacturers’ instructions for safe operation.

Standards

This information is important for applications that are regulated by ASTM or NFPA® standards, for example, traffic control signs, emergency vehicles and certain railroad graphics. The user is solely responsible for determining and complying with all current and applicable local, state and federal regulations regarding the use and application of graphics materials.

ASTM D-4956: Standard Specification for Retroreflective Sheeting for Traffic Control
ASTM D-4956 covers flexible, non-exposed glass bead lens and microprismatic, retroreflective sheeting designed for use on traffic control signs, delineators, barricades, and other devices. For Type I sheeting, it specifically covers the following colors: White, Yellow, Orange, Green, Red, Blue, and Brown. As defined in ASTM D-4956, IJ680CR-10 is classified as Type I sheeting with a Class 3 adhesive. IJ680CR-10 meets the requirements specified in section 6.1.1.

According to NFPA® 1901, section 15.9.3.3 specifies that all retroreflective materials required by section 15.9.3.1 and 15.9.3.2 shall conform to the requirements of ASTM D4956, Standard Specification for Retroreflective Sheeting for Traffic Control, Section 6.1.1 for Type I sheeting. The film (white) meets the requirements for NFPA® 1901, Section 15.9.3.1 (Front and Sides).

AAR: Standard and Recommended Practices

This product is approved for use by the Association of American Railroads (AAR), Safety and Operations, as listed in the Manual of Standards and Recommended Practices, Section L - Lettering and Marking of Cars, Specification M-947, Adhesive-Backed Films.
