3M™ Tegaderm™ IV Securement Dressing
Designed for the BD Nexiva™ Closed IV Catheter System

Tegaderm™ IV Dressing for the BD Nexiva™ Catheter System combines the simplicity of Tegaderm™ dressings with a new style of catheter to provide another dependable dressing you can trust.

- Designed specifically to reduce catheter dislodgement
- Judged by clinicians as an excellent alternative in decreasing catheter movement, dislodgements and fall-outs compared to current stabilization techniques*
- Better at conforming around the BD Nexiva™ Catheter System as compared to standard IV dressings
- Perceived by clinicians to wear longer than current standard film dressings*
- Transparent, breathable and impermeable to liquids, viruses** and bacteria

*3M internal data on file
**In vitro testing shows that the transparent film of Tegaderm™ and Tegaderm™ HP dressings provides a viral barrier from viruses 27 nm in diameter or larger while the dressing remains intact without leakage.
3M™ Tegaderm™ IV Securement Dressing
Designed for the BD Nexiva™ Closed IV Catheter System

After a two week trial period, 96% of IV clinicians preferred Tegaderm™ IV Dressing for the BD Nexiva™ Catheter System over their current dressings for use with the BD Nexiva™ Catheter System. The IV clinicians rated all of the measured specific performance factors for Tegaderm™ IV Dressing for the BD Nexiva™ Catheter System as an excellent alternative to their current IV dressings for use with the BD Nexiva™ Catheter System.

These photos clearly demonstrate the advantages of using this specially designed dressing rather than a traditional transparent film dressing.

Tegaderm™ IV Dressing for the BD Nexiva™ Catheter System

is a Manufactured Catheter Stabilization Device

FDA classification for 3M Tegaderm™ Dressings is a Class 1 IV Catheter Securement Device

FDA 510(k) Classification:
Intravascular catheter securement device, Class 1

FDA 21 CFR880.5210: Intravascular catheter securement device, Class 1

INS Standards of Practice 2006 Edition

Standard 43: Catheter Stabilization:
43.1 Catheter stabilization shall be used to preserve the integrity of the access device and to prevent catheter migration and loss of access.
43.2 Catheters shall be stabilized using a method that does not interfere with the assessment and monitoring of the access site or impede vascular circulation or delivery of the prescribed therapy.

Practice Criteria - B:
Products used to stabilize the catheter should include manufactured catheter stabilization devices, sterile tape, and surgical strips.

CDC states that transparent dressings reliably secure the device, permit continuous visual inspection of the catheter site, permit patients to bathe and shower without saturating the dressing, and require less frequent changes than do standard gauze and tape dressings; the use of these dressings saves personnel time.

Tegaderm™ Advanced IV Dressings with stabilization border, notch and sterile tape are a manufactured stabilization device.
