(1) Maximum number of cable pairs based on the following specifications: 2Y2 & 2X2 Series = 24/26 gauge cable using 25 pair modular connectors for straight, in-line, 1-bank splice (18 ¼" overall cover length, 10" sheath opening) 2A2, 2B2, 2C2, 2D2, & 2E2 Series. = 24/26 gauge cable using 25 pair modular connectors for straight, in-line, 2-bank splice (27 ½" overall cover length, 19" sheath opening).

⅟ Alignment bars provided in 505 cover kits. Bold type indicates standard covers.
To select the correct cover:
1. Determine number of cable pairs
2. Determine splice bundle diameter
3. Determine sheath opening required

To select the correct endplate:
4. Determine cable entrance configuration
5. Determine outside diameter of each cable

Example:
Number of cable pairs = 1200/24 gauge
Splice bundle diameter = 6" (152 mm)
Sheath opening = 19" (483 mm)
Cable configuration = 3-way
   1200 pairs in/600 pairs out x 600 pairs out

Cable outside diameters:
   1200 pairs = 2.6" (66 mm)
   600 pairs = 1.9" (48 mm)

Correct codes to order one cover and two endplates.
1 each 2B2A Cover Assembly
1 each 2B2-1E Endplate Assembly
1 each 2B2-2E Endplate Assembly

A complete 2-Type Closure for enclosing spliced connections of communication cables requires the selection of one (1) cover assembly kit and two (2) endplate assembly kits from the same series. Note from the example that the cover series (2B2) matches the endplate series (2B2). This ordering procedure is an approximate guide only. Proper cover and endplate selection will vary with type of splice connectors and splicing method used.
