3M™ Nomad™ Matting
Proven expertise over many years

Over 30 years ago, 3M scientists developed a product which would help effectively protect building entrances from dirt. The first Nomad™ matting product with its revolutionary vinyl “coiled loops” was developed to help remove moisture as well as dirt and debris. Incorporating carpet fiber technology, 3M expanded its entrance matting offering. Today, thanks to continuous innovation and proven expertise, 3M offers a complete line of entrance matting as well as Safety-Walk™ branded wet area and anti-fatigue work area matting.
The 3M™ Nomad™ Entrance Matting System is designed to stop dirt and moisture at the door, helping keep floors clean throughout your facility. Today’s emphasis on green cleaning and the impact of the cleanliness of a building on health makes trapping dirt and moisture at the door critical. By using the 3M™ Nomad™ Entrance Matting System, the result is cleaner-looking floors that are easier to maintain, safer for building occupants, and less likely to be damaged by tracked-in dirt.

THE 3M™ NOMAD™ ENTRANCE MATTING SYSTEM CONSISTS OF 2 TYPES OF MATS:

1. **3M™ Nomad™ Scraper Matting**
   - First line of defense in the Nomad™ Entrance Matting System. Vinyl loops remove dirt and moisture from shoes before entering the building.

2. **3M™ Nomad™ Z-web Scraper Matting**
   - Designed for recessed wells and foyers to trap more dirt and moisture.

3M™ Nomad™ and 3M™ Safety-Walk™ vinyl matting has been certified by the National Floor Safety Institute (NFSI) as providing a “high traction” backing. NFSI tested these 3M™ mats using its NFSI 101-C Test Method for Measuring Dry Transitional Coefficient of Friction (TCOF) of Floor Mat Backing Materials and found each mat to have a TCOF of greater than 0.5. According to NFSI, mats lacking the high-traction backing offered by 3M™ matting are more prone to movement, which can increase the risk of migration, buckling, and curling, which, in turn, can contribute to slip, trips, and falls. Scotchgard™ Stone Floor Protector has been certified by the National Floor Safety Institute as providing “high traction.” A wet static coefficient of friction (SCOF) of greater than 0.60 was chosen by NFSI as the criteria for “high traction” because according to NFSI, floor surfaces maintaining this level of slip resistance when wet have proven to reduce slip-and-fall claims by between 50% and 90%.
