

# Great News!

**3M**

## We've made our foam adhesive dressing even more absorbent and breathable!

### Delivers more:

- Fluid handling capacity
- Reduced risk of maceration
- Cost savings

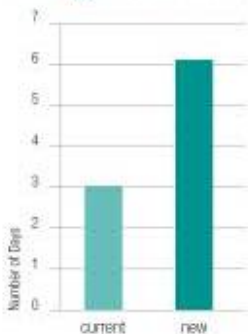

Watch for packaging with our new name and new breathability symbol!

### Introducing our newly improved 3M™ Tegaderm™ High Performance Foam Adhesive Dressing

We've upgraded our current foam adhesive dressing to the newly improved 3M™ Tegaderm™ High Performance Foam Adhesive Dressing. You'll find that it has everything you love about our current foam adhesive dressings, including the easy-to-use spoke delivery system and trusted 3M film technology. We've added a new layer to the design of our dressing, significantly enhancing fluid handling to help you deliver even better care for high- and low-exuding wounds.

Best of all, the dressing's codes, shapes and sizes all stay the same, so ordering will be as easy as ever!

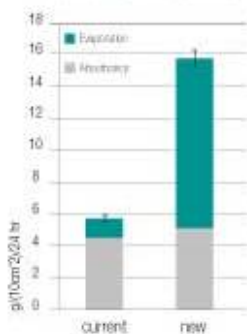

### Longer Wear Time

3M™ Tegaderm™ High Performance Foam Adhesive Dressing provides significantly longer wear times than our current dressing — 100 percent longer for potential cost savings! Yet it still removes gently for patient comfort.

Data on file at 3M. *In vitro* human volunteer studies (011215, 011239, 011246).

### Higher Fluid Handling Capacity

3M™ Tegaderm™ High Performance Foam Adhesive Dressing has significantly improved capacity for fluid handling when there is excess exudate.

Test method per EN 13726-1:2002.

Look for the new dressing in June!
