

# Transbond™ MIP Moisture Insensitive Primer

Adhesive Bond Strength at 24 hours\*  
Transbond™ MIP Primer vs Transbond™ XT Primer

■ Transbond MIP Moisture Insensitive Primer  
■ Transbond XT Primer

\* Transbond XT Orthodontic Adhesive with Unitek™ Miniature Twin V-Slot Bracket

## Moisture has met its match

Transbond™ MIP Moisture Insensitive Primer is a hydrophilic or “moisture friendly” material that allows you to bond in a moist environment without compromising bond strength.

Just a single coat of Transbond MIP primer over a water- or saliva-contaminated, etched tooth surface makes the application technique fast and easy.

Laboratory testing and clinical evaluations using Transbond™ XT Light Cure Adhesive

have proven that Transbond MIP primer offers bond strength in a moist environment comparable to a conventional primer in a dry environment. That’s good news for your practice, because it can save time.

Combining the simple technique and the effective results of Transbond MIP primer with Transbond XT Light Cure Adhesive or APC™ Adhesive Coated Appliance System will help you reduce chair time and increase your office efficiency. Moisture has definitely met its match.
