Is Your OR Team  
Painting When They Should  
Be Scrubbing?

If your OR teams aren't applying surgical patient preps correctly, they could be jeopardizing patient safety at your facility.

Here are the facts:

- **Only one surgical patient prep is designed to be applied in a single, painted coat** — with no scrubbing: 3M™ DuraPrep™ Surgical Solution (Iodine Povacrylex [0.7% available iodine] and Isopropyl Alcohol, 74% w/w) Patient Preoperative Skin Preparation.
- **Chlorhexidine Gluconate preps like ChloraPrep® Patient Preoperative Skin Preparation must be scrubbed on to be properly applied.**
- **Unfortunately, many ChloraPrep users may be jeopardizing patient safety by not following manufacturer's instructions for use if painting instead of scrubbing.**

See how painting with DuraPrep solution can increase your application compliance and OR efficiency.

Contact your local sales representative for more information.
