Protect Your Look
From the Elements

Lasting Protection from the Effects of UV Light and Acid Dew

Over time, UV light and acid dew can cause discoloration and spotting on graphics, especially in warm climates. Keep wraps looking glossy and new with 3M™ Scotchcal™ Gloss Overlaminate 8528. Overlaminate 8528 protects your customer’s look and adds durability to wraps. It reduces the harmful effects of UV light and acid dew on the film, ensuring that wraps last longer and look better. And with overlaminate 8528, the look won’t only be protected, it’ll be guaranteed to resist these harsh environmental elements. 3M even warrants the performance of overlaminate 8528 on horizontal surfaces, an industry first, offering your customers a one-of-a-kind look with peace of mind.
Your Power Over Wraps

Your customers are looking for an opportunity to keep their wraps looking great. By offering 3M™ Scotchcal™ Gloss Overlaminate 8528, you’ll provide longer-lasting graphics that stay vibrant, which helps them make the most of their investment—and set you apart from the competition.

Usage

- Protection from harsh environmental conditions such as extreme temperatures, UV light damage and acid dew
- Guards against spotting and discoloration caused by UV light and acid dew
- Prolong and conserve graphic treatments

Features and Advantages

- Proprietary 3M technology provides excellent durability and reliability
- 2 mil cast vinyl provides great conformability and dimensional stability
- Glossy finish for that wet paint look customers demand
- Designed to be used easily with solvent, latex and UV inkjet inks
- No premature spotting or discoloration, saves money and satisfies your customer
- Keep wraps looking great even in harsh conditions
- Offer your customers peace of mind with the industry’s only published horizontal warranty to cover the hoods and roofs of vehicles.
