

Respirator Filter Selection Guide

3M

Introduction

The information in this Guide is correct as at April 2013, and should be used in conjunction with general occupational hygiene knowledge.

The actual workplace conditions will vary from one worksite to another. This information is intended only as a guide. Selection of the most appropriate RPE will depend on the particular situation and should be made only by a competent person familiar with the working conditions and limitations of RPE.

If you have any questions relating to the proper selection and use of 3M respirators, or the use of this Guide, contact your local 3M OH&ES representative or call the 3M Health and Safety Helpline on 0870 60 800 60 in the UK, or 1800 320 500 in Ireland.

Respiratory Protective Equipment Selection

This Respirator Filter Selection Guide provides information on the appropriate 3M™ Filters to be used when using 3M Negative Pressure and Powered Air respirators for nearly 700 chemicals. The guide also includes Workplace Exposure Limits (WELs) for these substances, a brief summary of their acute effects, and if the 3M™ Monitor badges may be used to determine personal exposures.

Selection of RPE: Risk Assessment

Before selecting RPE, a full risk assessment must be performed. If the risk assessment concludes that control of personal exposure is inadequate, employers must introduce preventative or control measures. If control of exposure is still deemed inadequate after the measures have been introduced, RPE may be used as the last resort.

If the risk assessment recommends RPE to be worn, and once the workplace contaminants and their concentrations have been identified, this guide can be used to help select appropriate 3M Filters for use with 3M Negative Pressure and Powered Air respirators.

RESPIRATORY PROTECTIVE EQUIPMENT PROGRAMME

Four Step Guide

Before selecting Respiratory Protective Equipment (RPE), a full risk assessment must be carried out in accordance with the relevant health and safety legislation. Where respirators are used in the workplace, a formal RPE programme should be implemented. It should include:

- Identification of the hazard and risk assessment.
- Education and training must be properly emphasised and conducted.
- Maintenance, cleaning and storage programmes must be established and routinely followed for reusable respirators.
- The whole programme must also be reviewed at regular intervals.

To correctly select RPE four basic steps should be followed:

1. Identify the potential hazard.

Before any selection of respiratory protective equipment can be made, it is important to identify the hazard against which you wish to protect. These hazards can be divided into dusts, mists, fumes, gases and vapours. Consideration may need to be given to oxygen deficiency and even extremes of temperature. No respirator is ideal for all these types of hazard. For example, respirators fitted with dust filters will not protect against gases or vapours and gas/vapour filters will not protect against dusts.

2. Understand and assess the contaminant's potential health effects.

Once the material against which you wish to provide protection has been identified, it is important to understand how that contaminant may affect your body. This information forms a vital part of the training the users receive and allows them to understand why they should wear the equipment provided. Also assess the level of contaminant in the workplace versus its Workplace Exposure Limit (WEL).

3. Select the appropriate Respiratory Protective Equipment (RPE).

The RPE comes in a wide variety of types, each suitable for a particular range of applications. Although the type of application of certain RPE may overlap, no respirator is ideal for all applications and care should be taken to understand the limitations of any respirator before selection. The respirator selected must be correct for the work, the environment and the wearer, and not interfere with other PPE.

4. Train the employees in the use and care of the respirator.

Once the respirator has been correctly selected for a hazard, the application and the individual wearer, it is essential to train the wearer in the correct fitting, use, maintenance and care of the respirator. It is also important to demonstrate the fitting of the respirator and how to conduct a face fit check. A Face Fit test should be performed on wearers of respirators with tight fitting facepieces i.e. disposable respirators and reusable half or full face masks.

SELECTION OF THE APPROPRIATE TYPE OF RPE

The nature of the hazard will determine the type of RPE chosen. RPE is designed specifically to deal with particular hazards, or a combination of hazards. Dust respirators provide no protection from the effects of solvent vapour just as a vapour respirator provides no respiratory protection against dusts. It is therefore essential that the RPE is correctly selected as a result of an accurate assessment.

Summary of the types of RPE

There are many types of RPE, but these can be broadly categorised into two types, 1) Air-filtering and 2) Air-supplying equipment.

1. Air-filtering Equipment

Equipment which takes in air from the work area and filters or cleans it before it is inhaled. These devices are referred to as air-filtering devices and rely on lung power (negative pressure respirator) or an external power source to draw contaminated air through a filter providing clean air to the breathing zone (powered air respirators).

2. Air-Supplying Equipment

Equipment which delivers uncontaminated air from an independent source to the wearer.

Gas and Vapour Negative Pressure Respirator Filters

Type A: For use against certain organic gases and vapours with a boiling point higher than 65°C as specified by the manufacturer.

A filters, whatever the class, are required to be marked with at least the filter type, the colour code Brown together with the filter class, e.g., A2.

Type B: For use against certain inorganic gases and vapours as specified by the manufacturer (excluding CO).

B filters, whatever the class, are required to be marked with at least the filter type, the colour code Grey together with the filter class, e.g., B1

Type E: For use against sulphur dioxide and other acidic gases and vapours as specified by the manufacturer.

E filters, whatever the class, are required to be marked with at least the filter type, the colour code Yellow together with the filter class, e.g., E1

Type K: For use against ammonia and organic ammonia derivatives as specified by the manufacturer.

K filters, whatever the class, are required to be marked with at least the filter type, the colour code Green, together with the filter class, e.g., K2.

Type Hg-P3: For use against mercury. The filter incorporates a particulate filter. The filter must be marked with at least the filter type, the colour code Red-White, together with the filter class, e.g., Hg-P3.

AX filters are for use against certain low boiling organic compounds. They are classified as in only one type and class, AX.

Combined filters for use against certain low boiling organic compounds, as specified by the manufacturer, and particles are classified according to their particle efficiency: Types AXP1, AXP2 and AXP3.

AX filters should only be fitted to the 3M full face masks.

There is no AX filter available for 3M Powered Respirators.

AX filters must be marked with at least the filter type, the colour code Brown together with the filter class. AXP3 filters are colour coded Brown-White.

Filter Combinations

If a filter is a combination of types, it shall meet the requirements of each type separately. The filter must also be marked with at least the filter type, and with each colour code. For example an ABEK2P3 filter will be marked, Brown, Grey, Yellow, Green and White.

RESPIRATOR CHARACTERISTICS, CAPABILITIES & LIMITATIONS

Limitations of RPE

A respirator may not be able to protect against all of the contaminants present in a particular work environment. Specific limitations are stated on the packaging and are included with use instructions and limitations. These must be carefully reviewed for each respirator before use. General precautionary information is given below. Refer to respirator packaging or operating manuals for specific information.

No respirator is capable of preventing all airborne contaminants from entering the wearer's breathing zone. RPE helps protect against airborne contaminants by reducing airborne contaminant concentrations in the breathing zone to below the WEL or other recommended exposure level. Misuse of respirators may result in over exposure to the contaminant and cause sickness or disability. For this reason, proper respirator selection, training, use and maintenance is required for the wearer to be properly protected.

General Use Instructions for RPE

- Failure to follow all instructions and limitations on the use of these respirators and/or failure to wear them during all times of exposure can reduce respirator effectiveness and may result in sickness or disability.
- Many of the contaminants which can be hazardous to a person's health include the ones that are so small they cannot be seen or smelled at dangerous levels.
- Before use of any respirator, the wearer must first be trained by the employer in proper respirator use in accordance with applicable safety and health regulations.
- Leave the contaminated area immediately if dizziness or other distress occurs, if the respirator becomes damaged or breathing becomes difficult, if contaminants can be smelled or tasted, or if irritation occurs.

Always be sure that the respirator is:

- Suitable for the job
- Fitted properly on the face
- Worn for entire work period
- Replaced when necessary

General Use Limitations:

- Air-filtering or purifying respirators do not supply oxygen, they simply filter out contaminants.
- Do not use when concentrations of contaminants are immediately dangerous to life or health, when concentrations are unknown, when concentrations exceed maximum use concentrations established by regulatory agencies or in atmospheres containing less than 19.5% oxygen (3M definition. Individual countries may apply their own limits on oxygen deficiency. Please seek advice if in doubt).
- Do not abuse or misuse any respirator.
- Do not use tight fitting RPE with beards, facial hair, or conditions that prevent direct contact between the face and the edge of the respirator.
- Mixtures of chemicals need to be treated with care as the effects of mixtures of chemicals can be additive or even synergistic. In all cases the HSE publication EH40 should be consulted for the treatment and calculation of combining WELs.
- Approvals and WELs may vary from country to country and from time to time. UK, Eire and European legislation should be consulted before using this guide. The USA and Canada use different criteria for selection and this guide is therefore not valid in the USA or Canada.
- Specialist protective equipment not described in this guide may be required for use against chemicals with poor warning properties, areas potentially deficient in oxygen (less than 19.5%) and concentrations of contaminant Immediately Dangerous to Life or Health (IDLH). In these cases your local 3M OH&ES representative or the 3M Health and Safety Helpline (0870 60 800 60 UK or 1800 320 500 Ireland) should be consulted for further advice.
- All information contained in the table and these notes has been compiled using reasonable skill and diligence and is offered in good faith, but 3M can accept no responsibility for any errors or omissions contained in this guide.

Caution: as with any respirator, incorrect use or failure to follow the instructions given could result in severe illness or permanent disability due to exposure to hazardous atmosphere. If in doubt about how to use the respirator, check with your supervisor or contact 3M.

Effects From Skin or Eye contact

If a chemical can be absorbed through the skin or eyes additional protection may be required.

LIMITATION OF FILTERS

Chemical Filters

Chemical filters are used on respirators to help remove and lower worker exposures to harmful gases and vapours in the workplace. There are several types of chemical filters:

- Organic vapour.
- Inorganic vapour.
- Acid gases.
- Ammonia.
- Formaldehyde.
- Mercury vapour.

It is important to understand how the different filter types work. All chemical filters consist of a container filled with a *sorbent*. A chemical filter *sorbent* is a granular porous material that interacts with the gas or vapour molecule to remove it from the air. Typically this sorbent is *activated carbon* or activated charcoal. *Activated carbon* is an amorphous form of carbon characterised by high adsorptivity for many gases and vapours.

The carbon for respirators usually comes from coconut shells or coal. The carbon is 'activated' by heating it to 800-900°C with heat or steam, which results in a porous internal structure (honeycomb-like). The internal surface area of activated carbon averages over 900 metres square per gramme.

Adsorption of Chemicals

This large surface area makes activated carbon ideal for the removal of organic vapours by adsorption. Adsorption is the adherence of gas or vapour molecules to the surface of the activated carbon. The attractive force between the activated carbon and the chemical molecule is a relatively small, weak physical force. The strength of the attraction depends in part on the chemical. Since only weak physical forces are involved, the process can be reversed. This is called desorption.

Desorption & Migration of Chemicals

Desorption is the process of an adsorbed material "letting go" from the activated carbon. Desorption can occur naturally during periods of non-use or by the presence of another more strongly adsorbed substance displacing a less strongly adsorbed chemical (i.e., a more volatile chemical). Generally, the more volatile the chemical the less strongly adsorbed, or the more likely it will undergo desorption. Desorption during storage or non-use times can result in chemical migration. Migration is the movement of a previously adsorbed chemical through the chemical filter, even without air movement.

Variables that appear to impact migration include:

- Volatility – the more volatile the chemicals, the greater the concern for migration.
- Water vapour co-adsorption – co-adsorption [from use in atmospheres with high relative humidity (>50%)] can increase the migration effect.
- Amount of material adsorbed onto the filter in the first use.
- Storage time.
- Vapour type.

The potentials for desorption and migration makes reuse of organic vapour filters a concern. Not only are the more volatile chemicals more likely to desorb but the capacity of the carbon is generally lower for these chemicals. This includes many inorganic gases and organic vapours. Inorganic gas desorption is prevented by the use of special filters. For organic vapours Europe uses a boiling point of less than 65°C as a guideline for identifying the more volatile chemicals. These chemicals are often classified as low boiling chemicals. Typical organic vapour filters would be expected to have lower capacity for these materials and desorption could be a major concern.

Chemisorption

To make the filters more selective for certain chemicals, sorbents can be impregnated with chemical reagents. Impregnated activated carbon removes specific gas and vapour molecules by chemisorption. Chemisorption is the formation of bonds between molecules of the impregnate and the chemical contaminant. These bonds are much stronger than the attractive forces of physical adsorption. The binding is usually irreversible. Reuse of chemical filters that work on the principle of chemisorption typically should not be a problem. In combination chemical filters, such as organic vapours and acid gases, the organic vapours are predominantly removed by adsorption.

HOW TO USE THE RESPIRATOR FILTER SELECTION GUIDE

The Respirator Filter Selection Guide lists appropriate 3M filters for 3M Negative Pressure and Powered Air Respirators for nearly 700 substances.

As many of the substances have synonyms commonly in use, **APPENDIX 1** presents a list of substances which are listed in this guide under another name. For example Isopropyl alcohol is listed as Propan-2-ol.

APPENDIX 2 presents the CAS numbers for the substances listed in the guide.

Terminology used in the Guide

Workplace Exposure Limits (WEL)

The WELs listed in this guide are from the HSE publication: EH40/2002 Occupational Exposure Limits 2005, unless otherwise stated.

If a chemical was not listed in EH40/2005, the Threshold Limit Values (TLV) published in the 2006 American Conference of Governmental Industrial Hygienists (ACGIH) were used. If there was no published ACGIH TLV available, the 2006 Workplace Environmental Exposure Levels (WEEL) from the American Industrial Hygiene Association (AIHA) were used.

Substances not assigned WEL

EH40/2005 states that: the absence of a substance from the lists of WELs does not indicate that it is safe. In these cases exposure should be controlled to a level to which nearly all the working population could be exposed, day after day at work, without adverse effects on health. In some cases there may be sufficient information to set a self-imposed working standard.

If no WEL were listed in either of the sources, for a dust a WEL of 10 milligrams per cubic metre (mg/m^3) 8 hour TWA has been assigned (Total Inhalable Dust). These substances are listed in the guide as WEL 10 mg/m^3 .

Worker's exposure must be kept below the WEL. Additionally, exposure to substance identified as causing cancer, sensitisation or heritable genetic damage must be reduced to as low a level as is reasonably practicable.

Threshold Limit Values

The TLVs from the ACGIH refer to airborne concentrations of substances and represent conditions under which it is believed that nearly all workers may be repeatedly exposed day after day without adverse health effects.

Units of Measurement

The concentrations are expressed in:

- ppm (parts per million)
- mg/m^3 (milligrams per cubic metre)
- f/ ml (fibres per millilitre).

Concentrations measured in mg/m^3 in this guide refer to the Total Inhalable Dust (TID) fraction unless otherwise stated. The WELs are approved for use where the atmospheric pressure is between 900 and 1100 millibars.

HOW TO USE THE RESPIRATOR FILTER SELECTION GUIDE (cont.)

WEL Reference Periods

There are two reference periods for which the WELs may be set; 8 hour Time Weighted Average (TWA) and 15 minute Short Term Exposure Limit (STEL). A substance may be assigned WELs set at either one or both reference periods.

- **8 hour TWA** - Some adverse health effects require prolonged or accumulated exposure. The 8 hour TWA is to set to control these effects by restricting the total intake by inhalation over one or more shifts.
- **15 minute STEL** - Some adverse health effects may be seen after short exposures. 15 minute STEL may be applied to control these effects. For a substance assigned a 15 minute STEL MEL, this level of exposure should never be exceeded.

In addition to the 2 reference periods above other reference periods apply.

Immediately Dangerous to Life or Health (IDLH)

This is the concentration considered Immediately Dangerous to Life or Health (IDLH) as defined by the National Institute for Occupational Safety and Health (NIOSH) in their 1994 publication (PB-94-195047). NIOSH defines IDLH concentration as "that poses a threat of exposure to airborne contaminants when that exposure is likely to cause death or immediate or delayed permanent adverse health effects or prevent escape from such an environment."

Odour Threshold

The method of defining and determining odour thresholds varies widely, thereby giving rise to a significant range of reported odour thresholds for many substances. Individuals may also respond differently to the same odour. At a given concentration, one person may smell and recognise the odour, while another person may barely notice it. The odour thresholds reported in the literature are typically determined for a single constituent, with no other chemicals present in the air. The single constituent situation rarely occurs in the workplace. Therefore, caution must be exercised in using these numbers. They may not be representative of odour detection capabilities of individual workers in your workplace. On the other hand, experience may indicate better warning properties than those indicated by the reported value. For these reasons, it is recommended that a gas/vapour filter change-out schedule be implemented rather than using odour properties as the primary indicator for filter change-out. Ranges of reported odour thresholds are listed. These have been obtained from a variety of publications. The primary reference was the AIHA publication. This publication was produced to develop better odour threshold reference information for chemicals with TLV. When an odour threshold value was not published by AIHA, the other references were used.

AP Filter Combinations

These compounds have been identified as possibly existing in both particulate and vapour phase by Perez and Soderholm. For these compounds 3M recommends that a gas vapour filter be used in addition to the traditionally accepted particulate filter.

INDEX OF SUBSTANCES LISTED UNDER A DIFFERENT NAME

Substance	Listed As
1,1-Dichloroethylene	Vinylidene chloride
1,2-Benzene-dicarboxylate	Dibutyl phthalate
1,2-Dichloropropane	Propylene dichloride
1,2-Dihydroxy-propane	Propylene glycol
1,2-Epoxy ethane	Ethylene oxide
1,2-Epoxypropane	Propylene oxide
1,2-Ethanediol	Ethane-1-2-diol
1,3-Butadiene	Buta-1,3, diene
1,3-Isobenzofurandione	Phthalic anhydride
1,4-Benzenediol	Hydroquinone
1,4-butanedicarboxylic acid	Adipic Acid
1,4-dicyanobutane	Adiponitrile
1,5-Pentanedial	Glutaraldehyde
1,6-Hexanedioic acid	Adipic Acid
1-Acetoxyethylene	Vinyl acetate
1-Butanamine	Dibutylamine
1-Chloro-2-propanone	Chloroacetone
1-Methoxy-2-propanol acetate	Propylene glycol monomethyl ether
1-Propanol	Propan-1-ol
2,2',2-Nitritotriethanol	Triethanolamine
2,3-Epoxy-1-propanol	Glycidol
2,4,4-Trimethylpentene	Diisobutylene
2,4,6-Trinitrophenol	Picric acid
2,5-Furanedione	Maleic anhydride
2-Aminopropane	Isopropylamine
2-Bromo-2-chloro-1,1,1-trifluoroethane	Halothane
2-Butanone	Butan-2-one
2-Butanone oxime	Methyl ethyl ketoxime
2-Diethylaminoethyl alcohol	Diethylaminoethanol
2-Epoxypropyl ether	Diglycidyl ether
2-Heptanone	Heptan-2-one
2-Hexenone	Hexan-2-one
2-Methycyclopentadienyl manganese tricarbonyl	Manganese cyclopentadienyl tricarbonyl
2-Methyl-1,3-butadiene	Isoprene
2-Methyl-2-propenenitrile	Methylacrylonitrile
2-Methylpropyl acetate	Isobutyl acetate
2-Pentanol acetate	1-Methylbutyl acetate
2-Pentanone	Pentan-2-one
2-Phenyl propane	Cumene
2-Propanol	Propan-2-ol
2-Propanone	Acetone
3-Heptanone	Heptan-3-one
Ethyl methanoate	Ethyl formate
Ethyl methyl ketone	Butan-2-one
Ethyl silicate	Tetraethyl orthosilicate
Ethylamyl ketone	5-methyl-3-heptanone
Ethylene chloride	1,2-Dichloroethane
Ethylene chlorohydrin	2-Chloroethanol
Ethylene diamine	1,2-Diaminoethane
Ethylene dibromide	1,2-Dibromoethane
Ethylene Dichloride	1,2-Dichloroethane
Ethylene glycol	Ethane-1-2-diol
3-Methyl-2-butanone	Methyl isopropyl ketone
4,4'-Diaminodiphenylmethane	4,4'-Methylene dianiline
4,4-Thiobis (6-tert-butyl-m-cresol)	6,6'-Di-tert-butyl-4,4'-thiodi-m-cresol
4,4'-Methylene-bis-(2-chloraniline)	2,2' Dichloro-4,4' methylene-dianiline
4-Methoxyphenol	Mequinol (INN)
a-Alumina	Aluminium Oxide
a-Aminopyridine	2-Pyridylamine
Acetic acid butyl ester	Butyl acetate
Acetic acid methyl ester	Methyl acetate

Acetic ester	Ethyl acetate
Acetyl oxide	Acetic anhydride
Acetylene dichloride	1,2 - Dichloroethylene
Acetylene tetrabromide	1,1,2,2 Tetrabromoethene
Acroleic acid	Acrylic acid
Adipic acid dinitrile	Adiponitrile
Adipinic acid	Adipic Acid
Allyl chloride	3 - chloropropene
a-Methylstyrene	2-Phenylpropene
Aminoethane	Ethylamine
Ammonium muriate	Ammonium chloride
Anatase	Titanium dioxide
Anhydrofluoric acid	Hydrogen fluoride
Antimony trihydride	Stibine
Azine	Pyridine
B-Aminoethyl alcohol	2-Aminoethanol
b-Chloroprene	2-Chloro-1,3-Butadiene
Benzene carbonyl chloride	Benzoyl chloride
Benzyl chloride	a-Chlorotoluene
Buthanethiol	Butyl mercaptan
Butyl ethanoate	Butyl acetate
Butylamine	n-Butylamine
Calcium Carbonate	Limestone
Camphor	Boman-2-one
Caprolactam	1,6 Hexanolactam
Carbon oxysulphide	Carbonyl sulphide
Carbon oxychloride	Phosgene
Carbonyl chloride	Phosgene
Catechol	Pyrocatechol
Caustic soda	Sodium hydroxide
Chlorobromomethane	Bromochloromethane
Chlorodiphenyls	Polychlorinated biphenyl
Chloroethylene	Vinyl chloride
Chloroformyl chloride	Phosgene
Chloropicrin	Trichloronitromethane
Chromuim Oxychloride	Chromyl chloride
Colophony	Rosin based solder flux fume
Cristobalite	Silica, crystalline
Cyclohexyl alcohol	Cyclohexanol
Cyclohexylmethane	Methylcyclohexane
Cyclonite	Hexahydeco-1,3,5 -trinitro-sym-triazine
DCIPE	bis- (2-Chloroisopropyl) ether
DGE	Diglycidyl ether
Di isobutyl Ketone	2,6-Dimethylbutyl acetate
di-(Epoxypropyl) ether	Diglycidyl ether
Di-2-ethylhexyl phthalate	Bis(z-ethylhexyl) phthalate
Diacetone alcohol	4-Hydroxy-4-methyl-2-pentanone
Dibutyl	Dibutyl phthalate
Dichlorotetrafluoroethane	Cryofluorane
Dicyclopentadienyl	Ferrocene
Diethanolamine	2-2' Immunodiethanol
Diethyl ketone	Pentan-3-one
Diethylene diamine	Piperazine
Diethylene glycol	2-2'-Oxydiehanol
Diethylene triamne	2-2' Imminodi (ethylamine)
Difluorodibromomethane	Dibromodifluoromethane
Dihydroxybenzene	Hydroquinone
Diisobutyl ketone	2,6-Dimethylheptane-4-one
Dimethyl acetamide	N,N-Dimethyl acetamide
Dimethylaminobenzone	Xylidine
Dimethylanilie	N,N-Dimethyl aniline
Dimethylbenzene	Xylene
Dimethylene oxide	Ethylene oxide
Dinitolmide	3,5-Dinitro-o-toluamide

INDEX OF SUBSTANCES LISTED UNDER A DIFFERENT NAME (cont.)

Dioxane	1,4-Dioxane
Diphenyl	Biphenyl
Diphenylmethane	Methylene bisphenol Isocyanate
Di-sec-octyl phthalate	Bis (2-chloroisopropyl ether)
Dry ice	Carbon dioxide
Epichlorohydrin	1-Chloro,2,3-epoxy-propane
Ethanedioic acid	Oxalic acid
Ethanolamine	2-Aminoethanol
Ethyl alcohol	Ethanol
Ethyl bromide	Bromoethane
Ethyl bromide	Bromoethane
Ethyl butyl ketone	Heptan-3-one
Ethyl chloride	Chloroethane
Ethyl chloride	Chloroethane
Ethyl ether	Diethyl ether
Ethyl mercaptan	Ethanethiol
Ethylene glycol dinitrate	Ethylene dinitrate
Ethylene glycol methyl ether acetate	2-Methoxyethyl acetate
Ethylenediamine	1,2-Diaminoethane
Ethylidene chloride	1,1 Dichloroethane
Ethylolamine	2-Aminoethanol
Fluorotrichloromethane	Trichlorofluoromethane
Freon 113	1,1,2-Trichloro-1,2,2-Trifluoroethene
Germanium tetrahydride	Germane

Isopropyl glycidyl ether	2,3-Epoxypropyl isopropyl ether
MEK	Butan-2-one
MEKO	Methyl ethyl ketoxime
MEKP	Methyl ethyl ketone peroxides
Mesityl oxide	4-Methylpent-3-en-2-one
Methanoic acid	Formic acid
Methyl alcohol	Methanol
Methyl amyl alcohol	4-Methylpentan-2-ol
Methyl bromide	Bromomethane
Methyl cellulose	2-Methoxyethanol
Methyl cellulose® acetate	2-Methoxyethyl acetate
Methyl chloride	Chloromethane
Methyl chloroform	1,1,1-Trichloroethane
Methyl ethanoate	Methyl acetate
Methyl ethyl ketone	Butan-2-one
Methyl glycol	Propylene glycol
Methyl iodide	Iodomethane
Methyl isoamyl ketone	5-Methylhexan-2-one
Methyl isobutyl carbinol	4-methylpentan-2-ol
Methyl isobutyl ketone	4-Methylpentan-2-one
Methyl n-amyl ketone	Heptan-2-one
Methyl n-Butyl ketone	Hexan-2-one
Methyl propyl ketone	Pentan-2-one

Methyl silicate	Tetramethyl orthosilicate
Methylal	Dimethoxymethane
Methylene chloride	Dichloromethane
Methylene oxide	Formaldehyde
Methylmercaptan	Methanethiol
MIBK	4-Methyl pentane-2-one
Mineral spirits	Stoddard solvent
MOCA	2,2' Dichloro-4,4' methylene-dianiline
Monochlorobenzene	Chlorobenzene
n-Amyl Acetate	Pentyl Acetate
Nitric oxide	Nitrogen monoxide
Nitroglycerin	Glyceryl trinitrate
o-Dichlorobenzene	1,2-Dichlorobenzene
o-Methylcyclohexanone	2-Methylcyclohexanone
o-sec Butylphenol	2-sec-Butyl phenol
PCB	Polychlorinated biphenyls
p-Dichlorobenzene	1,4-Dichlorobenzene
Perchloroethylene	Tetrachloroethylene
Phenacyl chloride	a-Chloroacetophene
Phenyl chloride	Chlorobenzene
Phenyl ether	Diphenyl ether
Phenyl glycidyl ether	Phenyl-2,3-epoxypropyl ether
Phenyl Mercaptan	Benzenethiol
Phenyl methanol	Benzyl alcohol
Phenylethane	Ethylbenzene
Phenylethylene	Styrene
Phosphoric acid	Othrophosphoric acid
Phosphorus oxychloride	Phosphoryl trichloride
p-Nitrochlorobenzene	1-chloro-4-nitrobenzene
Propane-1,2-diol	Propylene glycol
Propenenitrile	Acrylonitril
Propenoic acid	Acrylic acid
Propyl alcohol	Propan-1-ol
Propylbromide	1-Bromopropane
Propylcarbinol	Butan-1-ol
Propylene glycol	Propane-1,2 diol
Propylene glycol monomethyl ether	1-Methoxy propan-2-ol
Propylene glycol monomethyl ether acetate	1, Methylpentane-2,4-diol
Propyne	Methyl acetate
Quartz	Silica, crystalline
Quinone	p-Benzoquinone
RDX	Hexahydro-1,3,5-trinitro-sym-triazine
sec-Amyl Acetate	1-Methoxybutyl acetate
sec-Butyl alcohol	Butan-2-ol
sec-Hexyl acetate	1,3-Dimethylbutyl acetate
Silicon tetrahydride	Silane
Sodium bisulfate	Sodium hydrogen sulphite
Sodium metabisulfate	Disodium disulphite
Sulphur monochloride	Disulphur dichloride
Sulphur pentafluoride	Disulphur decafluoride
tert-Butyl alcohol	2-Methylpropan-2-ol
Tetramethylene cyanide	Adiponitrile
Thioglycolic acid	Mercaptoacetic acid
Tribromomethane	Bromoform
Trichlorohydrin	1,2,3-Trichloropropane
Trichloromethane	Chloroform
Triiodomethane	Iodoform
Trimethyl-carbinol	2-Methylpropan-2-ol
Tri-o-tolyl phosphate	Triorthogresyl phosphate
Tripoli	Silica, crystalline
Vinyl benzene	Styrene
Vinyl cyanide	Acrylonitrile
Vinyl toluene	Methylstyrene
Vinyl trichloride	1,1,2-Trichloroethane

CAS NUMBERS OF CHEMICALS LISTED IN THIS GUIDE

CAS	Substance
50-00-0	Formaldehyde
50-78-2	Acetylsalicylic acid
54-11-5	Nicotine
55-63-0	Glyceryl trinitrate
56-23-5	Carbon tetrachloride
56-81-5	Glycerol, mist
57-06-7	Allyl isothiocyanate
57-12-5	Cyanides
57-13-6	Urea
57-14-7	1,1-Dimethylhydrazine
57-24-9	Strychnine
57-50-1	Sucrose
57-55-6	Propylene glycol
57-57-8	B-Propiolactone
60-00-4	EDTA
60-24-2	Mercaptoethanol
60-29-7	Diethyl ether
60-34-4	Methyl hydrazine
62-74-8	Sodium fluoroacetate
64-17-5	Ethanol
64-18-6	Formic acid
64-19-7	Acetic acid
65-85-0	Benzoic acid
67-56-1	Methanol
67-63-0	Propan-2-ol
67-64-1	Acetone
67-66-3	Chloroform
67-72-1	Hexachloroethane
68-11-1	Mercaptoacetic acid
68-12-2	Dimethyl formamide
68-12-2	N,N-Dimethyl formamide

5332-73-0	3-Methoxypropyl amine
5714-22-7	Disulphur decafluoride
5989-27-5	d-Limonene
6153-56-6	Oxalic acid dihydrate
6423-43-4	Propylene dinitrate
6834-92-0	Sodium silicate
7429-90-5	Aluminium
7439-92-1	Lead
7439-96-5	Manganese
7439-97-6	Mercury, vapour
7439-98-7	Molybdenum
7440-02-0	Nickel
7440-06-4	Platinum
7440-16-6	Rhodium
7440-21-3	Silicon
7440-22-4	Silver
7440-25-7	Tantalum
7440-28-0	Thallium
7440-31-5	Tin
7440-33-7	Tungsten
7440-36-0	Antimony and compounds except stibine
7440-39-3	Barium
7440-41-7	Beryllium
7440-47-3	Chromium
7440-50-8	Copper
7440-58-6	Hafnium
7440-65-5	Yttrium
7440-67-7	Zirconium compounds
7446-09-5	Sulphur dioxide
7553-56-2	Iodine
7572-29-4	Dichloroacetylene
7580-67-8	Lithium hydride
7601-54-9	Trisodium phosphate
7601-90-3	Perchloric acid

7619-94-6	Perchloryl fluoride
7631-90-5	Sodium hydrogen sulphite
7637-07-2	Boron trifluoride
7646-85-7	Zinc chloride,fume
7647-01-0	Hydrogen chloride
7664-38-2	Orthophosphoric acid
7664-39-3	Hydrogen fluoride
7664-41-7	Ammonia
7664-93-9	Sulphuric acid
7681-52-9	Sodium hypochlorite
7681-57-4	Disodium Disulphite
768-52-5	n-Isopropylaniline
7697-37-2	Nitric acid
7719-09-7	Thionyl chloride
7719-12-2	Phosphorus trichloride
7722-84-1	Hydrogen peroxide
7722-88-5	Tetrasodium pyrophosphate
7723-14-0	Phosphorus (yellow)
7726-95-6	Bromine
7727-43-7	Barium sulphate
7758-01-2	Potassium bromate
7758-97-6	Lead chromate
7773-06-0	Ammonium sulphamidate
7778-18-9	Calcium sulphate
7778-44-1	Calcium arsenate
7782-41-4	Fluorine
7782-42-5	Graphite (natural)
7782-50-5	Chlorine
7782-65-2	Germane
7783-06-4	Hydrogen Sulphide
7783-07-5	Hydrogen selenide
7783-41-7	Oxygen difluoride
7783-54-2	Nitrogen trifluoride
7783-60-0	Sulphur tetrafluoride
7783-79-1	Selenium hexafluoride
7784-42-1	Arsine
7789-06-2	Strontium chromate
7789-24-4	Lithium fluoride
7789-30-2	Bromine pentafluoride
7789-75-5	Calcium fluoride
7790-91-2	Chlorine trifluoride
7790-94-5	Chlorosulphonic acid
7803-51-2	Phosphine
7803-52-3	Stibine
7803-62-5	Silane
8001-58-9	Creosote
8002-05-9	Petroleum distillate (naphtha)
8002-74-2	Paraffin wax fume
8004-13-5	Phenyl ether-biphenyl mixture, vapour
8006-61-9	Gasoline
8006-64-2	Turpentine
8008-20-6	Kerosene
8030-30-6	Naphtha (coal tar)
8030-30-6	Rubber solvent
8032-32-4	VM&P Naphtha
8050-09-7	Rosin based solder flux fume
8052-41-3	Stoddard solvent
8052-42-4	Asphalt (petroleum), fume
9002-83-9	Chlorotrifluoroethylene
9002-86-2	Polyvinyl chloride
9004-34-6	Cellulose
9005-25-8	Starch
9006-04-6	Rubber fume
9006-04-6	Rubber process dust
9014-01-1	Subtilisins - Bacillus Subtilis (Carlsberg)
10024-97-2	Nitrous oxide
10025-67-9	Disulphur dichloride
10025-87-3	Phosphoryl trichloride
10026-13-8	Phosphorus penta-chloride
10028-15-6	Ozone

10035-10-6	Hydrogen bromide
10049-04-4	Chlorine dioxide
10101-41-4	Gypsum
10102-43-9	Nitrogen monoxide
10102-44-0	Nitrogen dioxide
10210-68-1	Cobalt carbonyl
10294-33-4	Boron tribromide
12001-26-2	Mica (less than 1% quartz)
12057-24-8	Lithium oxide
12079-65-1	Manganese cyclopentadienyl tricarbonyl
12125-02-9	Ammonium chloride
12179-04-3	Borates,tetra,sodium salts - Pentahydrate
12604-58-9	Ferrovandium, dust
13400-13-0	Cesium fluoride
13463-39-3	Nickel carbonyl
13463-40-6	Pentacarbonyliron
13463-67-7	Titanium dioxide
13494-80-9	Tellurium
13530-65-9	Zinc chromate
13838-16-9	Enflurane
14807-96-6	Talc - Respirable dust
14977-61-8	Chromyl chloride
15096-52-3	Cryolite
15625-89-5	Trimethylolpropane triacrylate
16219-75-3	Ethylidene norbornene
16842-03-8	Cobalt hydrocarbonyl
16984-48-8	Fluorides
17702-41-9	Decaborane
17831-71-9	Tetraethylene glycol diacrylate
19287-45-7	Diborane
19624-22-7	Pentaborane
20816-12-0	Osmium tetroxide
21351-79-1	Cesium hydroxide
25013-15-4	Methylstyrene
25038-54-4	Nylon
25154-54-5	Dinitrobenzene (all isomers)
25167-70-8	Diisobutylene
25321-14-6	Dinitrotoluene (mixed isomers)
25322-68-3	Polyethylene glycols
25551-13-7	Trimethylbenzene
25639-42-3	Methylcyclohexanol
26125-61-1	p-aramid respirable fibres
26140-60-3	Terphenyls (all isomers)
26499-65-0	Plaster of Paris
26628-22-8	Sodium azide
26675-46-7	Isoflurane
26952-21-6	Isooctyl alcohol (mixed isomers)
29191-52-4	Anisidine
31242-93-0	Chlorinated diphenyl oxide
34590-94-8	(2-methoxyethylethoxy) propanol
39628-23-9	bis-(2-Chloroisopropyl) ether
59355-75-8	Methyl acetylene propadiene mixture
60676-86-0	Silica, fused - Respirable dust
61788-32-7	Hydrogenated terphenyls
61790-53-29	Diatomaceous earth (uncalcined)
63938-10-3	2-Chloro-1,1,1,2-tetra fluoroethane
65997-15-1	Portland Cement
68476-85-7	Liquified petroleum gas
83968-18-7	Dialkyl 79 phthalate
