

3M™ 360 Encompass™ System

- Weave computer-assisted coding, documentation improvement, quality metrics and analytics into one
- Receive accurate, complete and compliant data, while improving workflow efficiencies and identifying processes that impact patient care in real-time
- Integrate fully with the market-leading 3M™ Coding and Reimbursement System

The 3M advantage

Since late 2011, more than 2,000 hospitals and healthcare organizations across the country have chosen 3M 360 Encompass to break down the silos separating their clinical documentation and coding workflows.

Why? 3M seamlessly integrates computer-assisted coding, clinical documentation improvement, concurrent quality metrics and analytics into a single application to capture, analyze and advance patient information across the continuum of care. These organizations apply the cost- and time-saving benefits of our proprietary natural language processing (NLP) technology to their coding process.

Defining the industry

Now more than ever, hospitals have to solve the healthcare coding and reimbursement puzzle. Among the challenging puzzle pieces? Bullet-proof documentation. An industry paradigm shift to pay-for-outcome models. ICD-10's volume of codes. The present and future coder shortage.

The first product of its kind, the 3M 360 Encompass System integrates computer-assisted coding (CAC), clinical documentation improvement (CDI), concurrent quality metrics and analytics into one application to capture, analyze and advance patient information across the care continuum.

Built on 3M's logic for grouping and reimbursement, the 3M 360 Encompass System leverages NLP and our platform's blend of statistics and rules to automate coding and documentation improvement. The system offers users multiple dashboards and workflows, integration between CDI and coder teams, numerous reporting capabilities and embedded quality indicators. As our network of users grows daily, 3M continues to raise the bar with improved functionality and greater quality measures.

Why does it work?

3M 360 Encompass integrates and streamlines clinical documentation and coding workflows, so coders and CDI specialists are able to work from the same content, reducing duplication.

For example, 3M 360 Encompass gives CDI specialists visibility into the auto-suggested codes, allowing them to identify the working DRG sooner in a patient's stay. The NLP platform in 3M 360 Encompass can locate evidence throughout the documentation that a CDI specialist may have overlooked. It also identifies missing information and then auto-suggests a physician query—all while the patient is still in-house. This combination means coding teams can take advantage of the pre-coding work done by CDI, and both teams can see each other's notes, summaries, queries, follow-ups and findings.

3M™ 360 Encompass™ System

The 3M 360 Encompass System uses NLP to review the documentation and identify key quality metrics, including potentially preventable readmissions (PPRs) and complications (PPCs), as well as patient safety indicators (PSIs), concurrent with the patient's stay. This gives you the opportunity to identify, prior to billing, any coding or documentation concerns, as well as drill into root-cause analysis on the spot.

All in one

An integrated application can help you improve and streamline your workflows and build synergies by having your content work together. The 3M 360 Encompass System:

- Builds intelligence into worklist assignments based on the system's computer-assisted coding analysis for concurrent reviewers and coders, including the same edits/content for ICD-10
- Provides early warning indicators when documentation is insufficient
- Lets the user derive a concurrent working DRG at the beginning of a patient visit
- Offers a growing list of role-specific, at-a-glance dashboards and reporting capabilities
- Enables effective and immediate communication between coders, CDI specialists and quality teams

All together, these factors can help you achieve impressive results. Our health system clients report boosts in coder productivity and agreement rates, tremendous gains in DRG assignment accuracy, and dramatic drops in patient safety issues and hospital-acquired conditions. Our clients see increases in their case mix index, as well as decreases in their medical necessity denials.

Built on the best

With the **3M™ Coding and Reimbursement System** as its foundation, 3M 360 Encompass combines 3M's clinical documentation improvement knowledge and software tools with proprietary NLP capabilities.

The system provides 3M expertise in the regulatory environment with powerful statistical methodologies to create a comprehensive NLP platform that uses both expert rules and statistics to deliver computer-assisted coding, clinical documentation improvement and quality metrics. The result? Improved reimbursement accuracy and reduced costs across your health system.

When it all works together

For hospitals to meet the rising demands of competition, compliance and patient care, they must have an efficient and accurate revenue cycle management system.

But what does that really look like?

It looks like coding and clinical documentation working from the same content, reducing duplication. It looks like facility and professional services coders using one application, putting an end to disjointed workflows and communication breakdowns. It's timely, complete query responses from physicians and full confidence that HCCs are captured. It's big-picture insights so hospitals can stay ahead of market changes.

It looks like your teams, workflows and applications are focused on improving patient care. The 3M™ 360 Encompass™ System platform can make this possible.
