Contact your local 3M Patient Warming representative.

In-warranty Repair and Exchange
To return a device to 3M Patient Warming for service, first obtain a Return Authorization (RA) number from a customer service representative. Please use the (RA) number on all correspondence when returning a device for service. A shipping carton will be delivered to you at no charge, if needed. We will service and ship your device within five (5) working days of our receipt. Call your local supplier or sales representative to inquire about a loaner device while your device is being serviced.

When You Call for Technical Support
Remember, we will need to know the serial number of your unit when you call us. The serial number label is located on the bottom of the warming unit.
Introduction

The 3M® Ranger® irrigation fluid warming system is designed to warm irrigation fluids and deliver these at flow rates under gravity up to 867 mL/min when the bag is hung 100 cm above the scope. At these flow rates, the device maintains fluid output temperatures ranging from 33°C to 41°C (Note: This is for room temperature fluids only). It takes less than 2 minutes to warm up to the 41°C set point temperature. The alert points on the Model 247 are 48°C and 50°C.

The fluid warming disposable set is sterile, latex-free, single-use-only and is designed to be used with the reusable Model 247 warming unit. For additional information on Ranger disposable sets visit us online at rangerfluidwarming.com. This manual includes operating instructions and unit specifications for the Model 247 irrigation fluid warming system. For information about using Ranger irrigation fluid warming disposable sets with the Model 247 irrigation fluid warming unit, refer to the “Instructions for Use” included with each disposable component. The Ranger irrigation fluid warming system should only be used in healthcare facilities by trained medical professionals.

Indications for Use

The Ranger irrigation fluid warming system is intended to warm irrigation fluids.

Explanation of Signal Word Consequences

**WARNING:** Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

**CAUTION:** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

**NOTICE:** Indicates a situation which, if not avoided, could result in property damage only.
 english | 3M™ Ranger™ Irrigation Fluid Warming System

⚠️ WARNING:
1. To reduce the risks associated with hazardous voltage and fire and thermal energy hazards:
   • Do not substitute other devices (i.e. Model 245) for the Ranger irrigation fluid warming unit or Ranger irrigation disposable sets.
   • Do not continue use of the unit if the over-temperature alert continues to sound and the temperature does not return to the set point temperature. Immediately stop fluid flow and discard the disposable set. Have the warming unit tested by a biomedical technician or call 3M Patient Warming technical service.
2. To reduce the risks associated with hazardous voltage and fire:
   • Do not modify or service this device, and do not open the warming unit case - there are no user-serviceable parts in the Ranger warming unit.
   • Connect power cord to receptacles marked “Hospital Only,” “Hospital Grade,” or a reliably grounded outlet.
   • Use only the power cord specified for this product and certified for the country of use.
   • Do not allow the power cord to get wet.
   • Do not use the Ranger warming system when it appears the warming unit, power cord, or disposable is damaged. Use only 3M specified replacement parts.
   • Keep power cord visible and accessible at all times. The plug on the power cord serves as the disconnect device. The wall socket outlet shall be as close as practical and shall be easily accessible.
3. To reduce the risks associated with air embolism:
   • Never use fluids if air bubbles are present in the fluid line.

⚠️ CAUTION:
1. Not for I.V. use.
2. To reduce the risks associated with cross-contamination:
   • The cleaning tool provides only superficial cleaning, it does not disinfect or sterilize the interior of the unit.
3. To reduce the risks associated with impact and facility medical device damage:
   • Clamp the Ranger irrigation fluid warming unit to an I.V. pole with a minimum 14” (35.6 cm) radius wheelbase and at a height no higher than 44” (112 cm).
4. To reduce the risks associated with environmental contamination:
   • Follow applicable regulations when disposing of this device or any of its electronic components.

NOTICE:
1. Federal law (USA) restricts this device to sale by or on the order of a licensed healthcare professional.
2. To avoid device damage:
   • Do not clean the warming unit with solvents. Damage to the case, label, and internal components may result.
   • Do not immerse the warming unit in cleaning or sterilizing solutions. The unit is not liquid proof.
   • Do not insert metallic instruments in the warming unit.
   • Do not use abrasive materials or solutions to clean the heater plates.
   • Do not allow spills to dry inside the unit, as this may make it more difficult to clean the unit.
3. The Ranger irrigation fluid warming unit meets medical electronic interference requirements. If radio frequency interference with other equipment should occur, connect the unit to a different power source.
Product Description
The Ranger irrigation fluid warming system consists of a Model 247 warming unit and a sterile disposable fluid warming set.

Ranger Irrigation Fluid Warming Unit
The warming unit is a compact, lightweight, liquid-resistant device with a clamp located on the side for attachment to an I.V. pole. When mounted to the I.V. pole, the unit fits easily above the 3M™ Bair Hugger™ 500 or 700 series warming unit. A carrying handle on the top of the unit makes it easy to transport.

Located on the front panel you will find:
- Alphanumeric display that indicates the heater temperature during normal operation. In an over temperature condition, the display alternately flashes a temperature of 48°C or higher and the word “HI.” An audible alert also sounds. In an under-temperature condition, the display alternately flashes a temperature of 33°C or lower and the word “LO.”
- Alert indicator light that comes on when either an over- or under-temperature condition occurs.

Ranger Irrigation Fluid Warming Disposable Set
Irrigation fluid warming sets include a cassette, tubing, connectors, flow chamber and clamps.

<table>
<thead>
<tr>
<th>Flow Rate</th>
<th>Priming Volume</th>
<th>Patient Line Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>Irrigation set</td>
<td>0–867 mL/min</td>
<td>308 mL</td>
</tr>
</tbody>
</table>

1. Refer to the instructions provided with each disposable set for information on use.
2. With the bag hung 100 cm above the scope under gravity flow.
Model 247 Product Safety Features

The following chart describes the safety alarm features of the Ranger irrigation fluid warming unit.

<table>
<thead>
<tr>
<th>Alert Type</th>
<th>Set-Point</th>
<th>Indication</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary over-temperature alert system</td>
<td>48°C</td>
<td>LED alternately displays &quot;HI&quot; and temperature, alert sounds, alert light flashes.</td>
<td>Primary Alert: Alert sounds, controller cuts power to the heaters until temperature falls below 48°C. When heater temperature drops below 48°C, audible and visual alerts stop.</td>
</tr>
<tr>
<td>Independent back-up over-temperature alert system (cut-off).</td>
<td>50°C</td>
<td>LED displays the temperature or has gone dark, alert sounds.</td>
<td>Primary failure. Temperature will rise to 50°C within a few seconds. The safety backup system is activated at 50°C and power is immediately shut off to the heating plates.</td>
</tr>
<tr>
<td>Under-temperature alert</td>
<td>33°C</td>
<td>LED displays &quot;LO&quot; and temperature, alert sounds, alert light flashes.</td>
<td>Heater temperature has fallen to 33°C. Alerts will stop when temperature rises above 33°C. Continue use of unit.</td>
</tr>
</tbody>
</table>

**NOTE:**
The difference in over-temperature alert system cut-off points does not indicate any difference in safety and is simply a result of tighter controller tolerances.

The Ranger irrigation fluid warming system is designed with very tight controls to regulate its temperature to the 41°C set-point. The microprocessor controller measures the temperature at the fluid pathway inside the warming plate four times every second, making it very responsive to changes in flow rate.
Instructions For Use

Preparation and Setup of the Ranger Irrigation Fluid Warming Unit

1. Attach the Ranger irrigation fluid warming unit to the I.V. pole. Tighten the pole clamp securely.

CAUTION:
To prevent tipping, clamp the Ranger irrigation fluid warming unit to an I.V. pole with a minimum 14" (35.6 cm) radius wheelbase and at a height no higher than 44" (112 cm). Failure to do so may result in damage to the product (see Figure 1).

2. Slide the irrigation cassette into the slot in the warming unit. The cassette can only fit into the device one way (see Figure 2).

3. Prime the warming set. For more information about priming the set, refer to instructions provided with the warming sets.

4. Plug the power cord into an appropriate outlet. Turn the unit ON. In a few seconds the alpha-numeric display will illuminate. It takes less than 2 minutes to warm up to the 41°C set point temperature.

5. Begin flow. When flow is completed, remove the warming set and discard according to institutional protocol.

Removing the Irrigation Fluid Warming Set from the Ranger Irrigation Fluid Warming Unit

1. Close the inlet clamp proximal to the fluid warming cassette and open all clamps distal to the cassette.

2. Disconnect the warming set from the fluid source, if applicable.

3. Allow a small amount of fluid to drain from the end of the patient line to reduce pressure in the cassette.

4. Remove the warming set from the warming unit and discard according to institutional protocol.
## Troubleshooting

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nothing illuminates on the warming unit panel.</td>
<td>• Unit is not turned on, plugged in, or power cord is not plugged into an appropriate outlet. • Unit failure.</td>
<td>• Turn unit on. Make sure the power cord is plugged into the power entry module of the warming unit. Make sure the warming unit is plugged into a properly grounded outlet. • Call 3M Patient Warming technical support.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alert indicator illuminates and alert sounds, alpha-numeric display alternately flashes a temperature of 48°C or higher and the word “HI.”</td>
<td>Temporary over-temperature condition because: • An extreme change in flow rates occurred (e.g., from 500 ml/min to stop flow). • Unit was turned on and reached set point temperature before warming cassette was inserted. • Fluids were prewarmed to above 42°C before being run through the warming unit.</td>
<td>• Open flow to reduce temperature. Alerts will stop when the temperature drops below 48°C. The unit is ready to use. • Alerts will stop when the temperature drops below 48°C. The unit is ready to use. • Turn off unit and unplug it. Discontinue infusion of fluids. Do not warm fluids before infusing them through the Ranger irrigation fluid warming unit.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alert sounds, alpha-numeric display and alert indicator light go dark.</td>
<td>Primary controller failure. Unit will no longer operate.</td>
<td>Power to heating plates will shut off if temperature rises to 50°C. Turn unit off and unplug it. Discontinue use of unit. Discard disposable set. Alert will continue to sound if you do not unplug unit. Call 3M Patient Warming technical support.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Condition</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit alerts soon after plugging it in (unit does not have to be turned on for this condition to occur). Heater temperature rises to 50°C and unit shuts down soon after plugging it in (unit does not have to be turned on for this condition to occur).</td>
<td>Test screw on bottom of unit is loose or missing.</td>
<td>Make sure test screw is completely tightened. If it is missing, turn unit off and unplug it. Call 3M Patient Warming technical support.</td>
</tr>
</tbody>
</table>
### Condition: Alert sounds but warming unit has been turned off.
- **Cause:** Independent backup safety system has been activated.
- **Solution:** Unplug unit. Call 3M Patient Warming technical support.

### Condition: Cannot remove cassette from unit.
- **Cause:**
  - Cassette is too full, fluids are still being infused, or clamp is open proximal to the warming cassette.
  - Warming unit is below patient level, creating excessive back pressure.
- **Solution:**
  - Make sure fluid is drained from warming cassette before sliding out the cassette, that fluids are no longer infusing, and that clamp is closed proximal to the warming cassette.
  - Raise unit above patient level.

### Condition: Alerts indicator light illuminates and alert sounds, alpha-numeric display alternately flashes a temperature of 33°C or below and the word “LO.”
- **Cause:** Under temperature condition caused by very high flow using very cold fluid, or defective heater/relay.
- **Solution:** Alerts should stop when temperature rises above 33°C. If alerts continue, turn off unit, unplug unit, and discontinue use. Call 3M Patient Warming technical support.

### Condition: Alpha-numeric display reads “Er 4” or “Open.”
- **Cause:** Open wire on temperature sensor.
- **Solution:** Do not use unit. Call 3M Patient Warming technical support.

### Condition: Alpha-numeric display reads “Er 5” or “Open.”
- **Cause:** Electrical interference.
- **Solution:** Remove the unit. Refer to biomedical technician or call 3M Patient Warming technical support.
Maintenance and Storage

Cleaning the Ranger Irrigation Fluid Warming Unit

Clean the Ranger irrigation fluid warming unit on an as-needed basis.

⚠️ CAUTION
1. To reduce the risks associated with cross-contamination:
   • The cleaning tool provides only superficial cleaning, it does not disinfect or sterilize the interior of the unit.

NOTICE
1. To avoid device damage:
   • Do not immerse the warming unit in cleaning or sterilizing solutions. The unit is not liquid proof.
   • Do not clean the warming unit with solvents. Damage to the case, label, and internal components may result.
   • Do not insert metallic instruments in the warming unit.
   • Do not use abrasive materials or solutions to clean the heater plates.
   • Do not allow spills to dry inside the unit, as this may make it more difficult to clean the unit.

TO CLEAN THE EXTERIOR OF THE WARMING UNIT:
1. Disconnect the Ranger irrigation fluid warming unit from the power source.
2. Wipe the outside of the unit with warm, soapy water, nonabrasive cleaning solutions, dilute bleach, or cold sterilants. Do not use abrasive materials.
3. Wipe with a dry, soft cloth.

TO CLEAN THE HEATING PLATES:
The Ranger hardware cleaning tool, is intended to clean both heating plates of the warming unit. It is not necessary to disassemble the warming unit to use the tool.
METHOD
1. Unplug the irrigation fluid warming unit.
2. Unfold the cleaning tool. Wet the foam pads with a nonabrasive solution, such as Alconox™ brand detergent.
3. Insert the tool from the back of the unit and pull the tool all the way out from the front.
4. Rinse the tool with water and repeat 3 times. Discard the tool according to institutional protocol.
5. Wipe off the unit to remove excess fluid.

TO CLEAN RESISTANT, DRIED-ON FLUIDS:
1. Spray a nonabrasive solution inside the slot of the warming unit and let sit for 15-20 minutes.
2. Clean the unit by using the cleaning tool.

NOTE: You may use a nonmetal instrument, such as a cotton swab, to clean the upper channels. If you are unable to adequately clean the unit, call 3M Patient Warming technical service.

Storage
Store all components in a cool, dry place when not in use.

Servicing
There are no user-serviceable parts in the Ranger irrigation fluid warming unit. All service must be performed by 3M Patient Warming or an authorized service technician.

Call 3M Patient Warming technical service at 800-733-7775 or 952-947-1200 for service information.
