Professionals Who Buff Only Want One Final Sand Scratch... Trizact™!

Trizact™ abrasives provide technicians the best opportunity to spend less time buffing and polishing by refining the previous sand scratch allowing them to achieve the finest finish available. Trizact™ can reduce overall polishing time by up to 75% while providing consistent paint finish results.

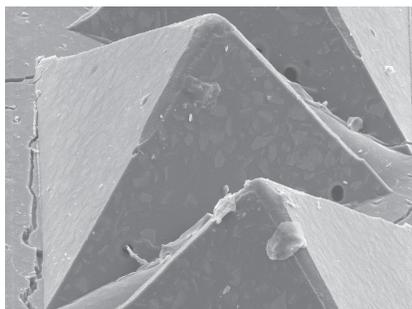

Here's Why:

Conventional Abrasives

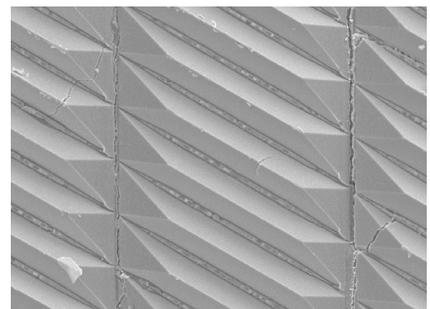

Variable and sized randomly arranged minerals leave inconsistent finish with deep scratches that are hard to buff.

3M™ Trizact™

Uniform size distributed abrasive structures provide uniform patterns and consistent sand scratches for leveling imperfections and defects.

3M™ Trizact™ 3000/5000 Abrasives.

For an even finer sand scratch, elongated distributed abrasive structures are used to provide uniform patterns and consistent sand scratches. This allows for faster buffing and better finishes.

Trizact™ Technology Will Deliver:

Cleaner Jobs

Less compound means less clean up.
Opportunity to use foam instead
of wool for less swirls.

Faster Buffing

Eliminates time spent chasing
Curly Q's, pigtails and inconsistent
sand scratches that can easily zap
shop productivity.

Better Finish

The finish is what really matters
and with Trizact™ 3000 and
Trizact™ 5000 as a part of the
Perfect-It™ Paint Finishing
System, you will achieve the
perfect finish.
