Here's just one example...

Reference Information

Organization: Toyota Motor Corporation

Document

Type: Technical Service Bulletin
Name: Windshield Wind Noise
Number: T-SB-0257-08
Issued: August 26, 2008

Description

Vehicles: 2003-2008 Corolla

Purpose: Some customers may experience a wind noise that sounds like a “buzz” or “reed vibration” sound from the windshield area. This condition may be the result of wind (air) pressure momentarily lifting the rubber windshield molding away from the body and then forcing the rubber molding back down against the body. The rapid oscillations of the rubber molding produce a high pitch “reed vibration” sound or “buzzing” sound. This bulletin contains a repair procedure what will assist in the repair of this condition.

Note: 3M provides this information for REFERENCE ONLY. ALWAYS refer to the original document or the OEM-provided model-specific collision damage repair manuals for complete instructions.
