NEW!

Imprint™ 4

VPS Impression Material

Speed

With innovative advancements in material science, Imprint™ 4 VPS Impression Material cuts intra-oral setting time nearly in half of its predecessor, Imprint™ 3 VPS Impression Material, and other leading competitive VPS dental impression materials. You can noticeably reduce chair time and stress for patients — without reducing the precision of your impression results.

Control

It's easy to get excited about such a drastic reduction in intra-oral setting time, but what good is speed without control? Imprint 4 materials put you in control with adequate working time — a factor for avoiding problems, and for making good impressions with reliable results.

Precision

Imprint 4 material is super-hydrophilic, and displaces moisture right from the start in the unset state, which helps prevent detail-disrupting voids.

Super hydrophilicity results in

- impressions with precise details that are easy to read
- precise-fitting restorations
- fewer adjustments required on final restorations

Fastest intra-oral setting time on the market!

75 sec.

without compromising working time.

Summary of Advantages

- Shortest intra-oral setting time for real time savings
- Sufficient working time for a stress-free procedure
- Super hydrophilicity for accurate detail reproduction
- Clinically proven tear strength
- Fresh material colors for easier readability
- Patient-pleasing mint flavor
