Build Smarter. Any Day. Every Day.

3M Commercial Air Barrier Membrane and Flashing Solutions
The elements don’t slow you down. Don’t let your materials, either.

3M™ Air Barrier Membrane and Flashing Solutions

- No primer required, meaning fewer steps and faster jobs for improved productivity
- Proprietary acrylic adhesives and backings designed to work in extreme environmental conditions
- Engineered to be compatible with sealants, silicones and common building substrates
- Can be applied in temps as low as 0°F (-17°C) or as high as 150°F (80°C)
- Resists UV exposure for up to 12 months
- NFPA 285 compliant*
- ABAA Evaluated

Winter Weather Shouldn’t Stop You Cold

Time is money, and you can’t stop a project just because it freezes. The acrylic adhesive on our air barrier and flashing tapes is specially formulated to stick at temperatures down to 0°F (-17°C) so you can keep applying it when the mercury drops.

UV Exposure Won’t Let Up and Neither Will You

With facade installation sometimes delayed for months at a time, it’s critical to ensure your building is enclosed and protected. Our air barriers and flashing tapes are specially formulated to withstand up to 12 months of UV exposure so your project can last as long as the days of summer.

*As part of an approved wall assembly
Adhesives and Backings
Built Compatible for the World Around Them
With project deadlines on the horizon you can’t afford to let your materials slow you down. Look to 3M air barrier technology to save time without primers or solvents and to stay on schedule. Our products are also highly compatible with other materials, whether you need it to stick to something or something to stick to it.

Materials that Stick With You — Even in the Wind and Rain
Wind and rain are a fact of life, and you want to spend time applying materials, not cleaning them up. Our proprietary acrylic offers immediate tack, even without a primer, to help you withstand the storm. Our products are also immediately rain-safe when applied, so you can keep working right up until it actually starts raining.

We’ll Help You Get Out of a Tight Spot Fast
Details are important — getting 1% of a flashing, seaming or sealing job wrong can ruin the other 99%, and rework is usually more complicated than just slapping on a patch. Our products are extremely conformable and elongate in multiple directions so you can get a good seal around corners and awkward shapes.
Non-Permeable Membrane — Engineered to help control indoor climate by reducing air leakage and uncontrolled airflow through the building envelope and preventing moisture ingress.

3M™ Air and Vapor Barrier 3015
- High-tack acrylic adhesive enables installation in most weather conditions
- Translucent membrane makes it easy to identify stud locations

Permeable Membrane — Designed to prevent water penetration while allowing your building to breathe.

3M™ Air Barrier with Permeable Backing 3015VP
- Engineered to provide exacting control over moisture, air and vapor
- Reverse-wound rolls allow for faster installation

Flashing Accessories — Designed for multidirectional applications in commercial buildings, enabling fast and easy detailing of windows, doors and penetrations.

3M™ Ultra Conformable Flashing Tape 3015UC
- Extremely flexible tape stretches horizontally and vertically and conforms around corners
- Enables up to 40% faster window and door detailing

3M™ Air & Vapor Through Wall Flashing Tape 3015TWF
- Exceptional puncture and abrasion resistance
- Specially designed for use as a through wall flashing and damp proof course

3M™ Air and Vapor Barrier 3015
- Narrower rolls available for detailing doors and windows
- Thin film design prevents tape buildup in the corners

3M™ Permeable Liquid Flashing Membrane 3015LF
- Ideal for complex penetrations or where a vapor permeable flashing system is needed
- Fast-drying, STPE-based liquid flashing allows for easy roll, brush or spray-on application
